## COMPANY PROFILE

### 公司简介

昆山健博密封件科技有限公司是成立于 1985 年的香港健大企业旗下子公司，昆山健博是专业从事橡胶密封件产品的研究、开发、生产的专业厂商，公司占地面积 35000 平米，总投资额 1500 万美元，公司具有较强的机械加工和模压生产能力，其产品广泛用于汽车、减速机、工程机械、农林机械、洗衣机、空调等行业。

“精益求精、顾客满意”是健博的质量方针，也是员工对自身素质完美的追求。广大员工确立了“健博的机遇，来自用户的满意”这一价值观念，以不断发现和满足国内外用户的需求来拓展市场，发展企业。本着“让我们的合作更紧密”的企业精神，健博通过强化内部各部门员工的合作，外部同用户以及供应商的合作，寻求共同发展，创建世界一流的密封件制造厂商。

## COMPANY PROFILE

Kunshan Kenbo Seal Technology Co., Ltd. is a subsidiary company of Hong Kong Jianda enterprise founded in 1985. Kenbo Jianbo is a professional manufacturer engaged in the research, development and production of rubber seal products. The company covers an area of 35,000 square meters, with a total investment of US \$15 million, the company has strong machining and molding capacity. Its products are widely used in automobile, reducer, construction machinery, agricultural and forestry machinery, washing machines, air conditioning and other industries.

"excelsior, customer satisfaction" is the quality policy of Jianbo, but also the pursuit of their own quality. The staff has established the value of "the opportunity of Jianbo, the satisfaction of users", in order to find and meet the needs of users at home and abroad to expand the market and develop enterprises. In the spirit of "let's cooperate more closely", we seek common development and create a world-class seal manufacturer by strengthening the cooperation of internal staff, external customers and suppliers.

诚信经营/品质保证/经验丰富

HONEST MANAGEMENT  
QUALITY ASSURANCE  
RICH EXPERIENCE

昆山健博密封件科技有限公司  
KUNSHAN KENBO SEAL TECHNOLOGY CO.,LTD.

以人为本/持续改善/环保理念，  
是我们的宗旨。

People oriented/Continuous improvement/Environmental protection concept,  
It's our mission statement.

## PRODUCTION EQUIPMENT

### 生产设备

创新的研发需要有好的设备来生产，我们具有专业的模具设计、生产能力，不断对设备进行技术维护及改良，应客户需求购置大型油封生产设备，引进自动仓储设备等。

技术创新、产能不断扩充，设备的更新及引进是我们每个阶段的重要目标。用先进及优质的设备来满足客户所有的需求。生产自动化将有效的降低生产成本。

健博采用领先技术，专注于每个细节，包括产品质量信息收集、规整和处理，一流的人才资源，先进的生产设备，奠定了我们坚实而牢固的质量基础；一丝不苟的敬业精神，熟练而专业的生产技能，成为我们缔造完美的保证。

aproduce, we have the professional mold She Ji, production capacity, Constantly on the equipment technical maintenance and improvement, for customer needs acquisition of large-scale production equipment, oil seals, introduction of automated storage devices, etc..

Technological innovation, expanding production capacity, equipment updates and the introduction of our important goals for each stage. With advanced and high-quality equipment to meet all customer needs. Automation will effectively reduce production costs.

KENBO with leading technology, focus on every detail, including product quality information gathering, and processing of regular first-class human resources, advanced production equipment, has laid a solid and strong quality of our foundation; meticulous professionalism, skilled and professional production skills, as we create the perfect guarantee.

## R&D TEAM

### 研发团队

我们拥有强大的研发团队，除了自行设计开发及材质研究，我们更采用主动追踪的经营态度，以客户所需产品为开发对象，了解产品特性及品质机能，使产品开发的成功率大为提升，从而提升客户满意度。

我们拥有多项产品专利，精良的研发团队，研发成果卓越，技术领先，产品线齐全。

材料研发拥有设备齐全的材料配方研究实验室 - 从配方研究开发、橡胶混炼、性能测试至品质检验一贯作业系统。未硫化胶料加工特性量测、材质硬度、机械强度量测、材料老化、耐油、耐燃料油、耐高低温、压缩变形回复性、弹性实验等。

## PRODUCTION EQUIPMENT

### 检测设备

昆山健博密封件科技有限公司为了更好的提供优质服务及油封配套工作，先后投入材料验证实验中心、油封模具设计及制造中心、各种环境的成品耐久实验室，确保每颗产品由开发设计到产品制造，各个环节得到充分验证，强大的实验能力及优秀的产品制造过程管控能力，确保了每颗产品完好无缺，让广大客户使用产品安心、更放心。

In order to provide high quality service and oil seal supporting work, Kunshan Jianbo Seal Technology Co., Ltd. has invested in the material verification laboratory, oil seal mold design and manufacturing center, and finished product durability laboratory in various environments, to ensure that each product from the development and design to product manufacturing, each link has been fully verified, strong experimental ability and excellent product manufacturing process management and control ability, to ensure that each product intact, let the general customers use the product to be at ease, more at ease.

密封元件运用范围极为广泛，从民生、衣食住行至航天科技均需利用各式密封件来辅助整体机构之防油、防水、防气等功能。油封是密封元件的动态密封件，我们制造运用于高转速的赛车引擎、航天设备及各类机械产品设备的密封元件。

Seals used extremely broad, from the people's livelihood, basic necessities to all kinds of space science and technology required to use seals to aid the overall organization of the anti-oil, water, anti-air capabilities. Seals oil seal is dynamic seals, we used high-speed car manufacturing engine, aerospace equipment and all kinds of machinery equipment, sealing elements.

# ARTICLE 1: INTRODUCTION OF OIL SEAL

## 第一篇 油封介绍

### 1、油封定义

油封是一般密封件的习惯称谓，顾名思义：油封是用来封油（油是传动系统中最常见的液体物质，也泛指一般的液体物质）的机械元件。机械的摩擦部分由于在机械运转时有油进入，为防止这些油从机械的间隙中泄漏而使用油封，并且除了油以外还需要防止水与化学药液的泄漏以及尘埃及土砂从外部侵入，这时候也要用到油封。

### 1. Definition of oil seal

As the name implies, oil seal is used to seal oil (oil is the most common liquid material in the transmission system, also generally refers to the general liquid material) mechanical components. The friction part of a machine is filled with oil while the machine is in operation. An oil seal is used to prevent the oil from leaking out of the clearance of the machine, and in addition to the oil also need to prevent the leakage of water and chemicals and dust and sand from outside invasion, this time also need to use oil seal.

### 2、油封分类

油封的各种不同型式，请参见：KSK油封常用型式。

### 2. Oil Seal classification

Various types of oil seals, please see: KSK commonly used type of oil seals.

### 3、油封材料

油封的常用材料有：丁腈橡胶，氟橡胶，氯化丁腈橡胶，硅橡胶，丙烯酸酯橡胶，聚氨酯，聚四氟乙烯等。选择油封的材料时，必须考虑材料对工作介质的相容性、对工作温度范围的适应性和唇缘对旋转轴高速旋转时的跟随能力。一般油封工作时其唇缘的温度高于工作介质温度 20~50°C，在选择油封材料时应予注意。详情请参照：橡胶种类及特性。油封的工作范围与油封使用的材料有关：材料为丁腈橡胶 (NBR) 时为 -25~120°C，丙烯酸脂橡胶 (ACM) -35~150°C，氟橡胶 (FKM) -25~250°C，氯化丁腈橡胶 (HNBR) -55~150°C。

### 3. Material of oil seal

Common material of oil seal is as following: NBR, FKM, HNBR, silicon rubber, ACM, polyurethane, PTFE etc. Customers shall consider material compatibility for working medium, adaptability of working temperature scope and following ability when lip edge revolve axis at high speed. Working medium temperature is between 20 C and 50 C for general oil seal working, customers shall be very careful when they choose material of oil seal. Please refer to following for detail: Type and character of oil seal. Working scope of oil seal has close relation to used material of oil seal: Temperature is between -25 C and 120 C for NBR, Temperature is between -35 C and 150 C for ACM, Temperature is between -25 C and 250C for FKM, Temperature is between -55 C and 150 C for HNBR.

### 4、油封功能用途

动力系统油封、新能源行业油封、农林机械油封、传动机械油封、水电系统油封、家电系统油封、减震系统油封等。

### 4. Function and application of oil seal

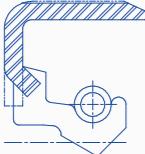

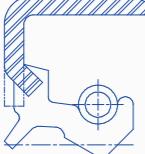

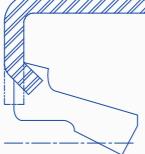

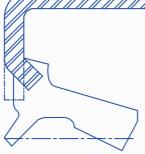

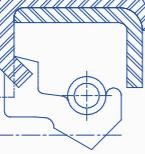

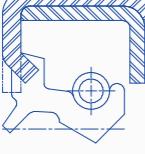

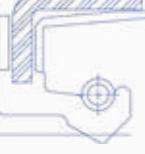

power system oil seal, new energy industry oil seal, agriculture and forestry machinery oil seal, transmission machinery oil seal, water and electricity system oil seal, home appliance system oil seal, shock absorption system oil seal, etc.

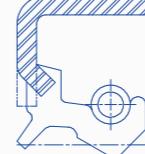

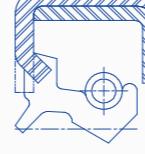

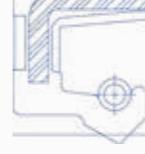

# KSK油封常用型式及特征用途

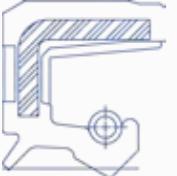

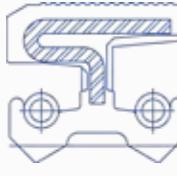

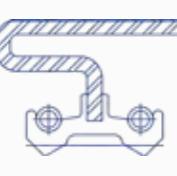

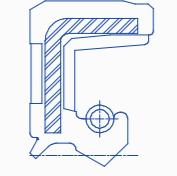

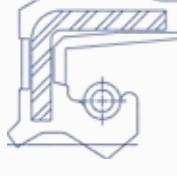

# KSK COMMON TYPE AND CHARACTERISTIC USE OF OIL SEAL

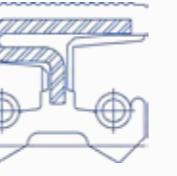

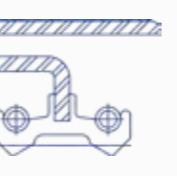

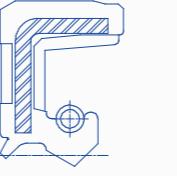

| 型式     | 结构简图 | 代码 | 主要特征用途   |   |
|--------|------|----|--|---|
|        |      |    | 唇部特征用途   | 外围特征用途  |
| 标准单唇型  |      | SC | 单唇，一个弹簧；通常使用在密封压力低于0.03Mpa的密封环境，不适用在有任何灰尘或高污染的环境中。     | 外围橡胶设计，确保外径之密封性：适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。 |
|        |      | SG |  | 外围橡胶沟槽设计，装配容易；特别适合高热膨胀材质装配孔于高温环境时使用。          |
| 标准双唇型  |      | TC | 双唇，一个弹簧；通常使用在密封压力低于0.03Mpa的有灰尘的密封环境，增加额外的防尘唇部提供对主唇的保护。 | 外围橡胶设计，确保外径之密封性；适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。 |
|        |      | TG |  | 外围橡胶沟槽设计，装配容易；特别适合高热膨胀材质装配孔于高温环境时使用。          |
| 无弹簧单唇型 |      | VC | 单唇，没有弹簧；通常使用在无压力，无污染的密封环境，特别适用于密封油脂。                   | 外围橡胶设计，确保外径之密封性；适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。 |
|        |      | VG |  | 外围橡胶沟槽设计，装配容易；特别适合高热膨胀材质装配孔于高温环境时使用。          |
| 无弹簧双唇型 |      | KC | 双唇，没有弹簧；通常使用在无压力，有灰尘的密封环境，增加额外的防尘唇部提供对主唇的保护。           | 外围橡胶设计，确保外径之密封性；适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。 |
|        |      | KG |  | 外围橡胶沟槽设计，装配容易；特别适合高热膨胀材质装配孔于高温环境时使用。          |

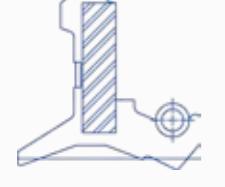

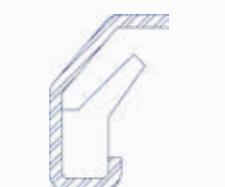

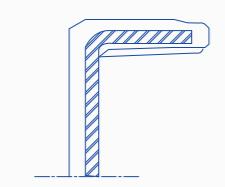

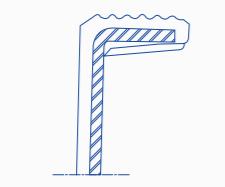

| Type                      | Structure diagram | Code | Main Characteristic Uses   |  |
|---------------------------|-------------------|------|--|--|
|                           |                   |      | Use of lip features  | Peripheral Character Purpose   |
| Standard single lip       |                   | SC   |  | Peripheral rubber design to ensure external diameter sealing: suitable for all kinds of material assembly holes, such as soft alloy or plastic, steel or cast iron and other materials.                                      |
|                           |                   | SG   | A single lip, belt Spring; usually used in a sealed environment with a sealing pressure of less than 0.03 Mp a, not suitable in an environment with any dust or high pollution.      | Peripheral rubber groove design, easy assembly; especially suitable for high thermal expansion material assembly hole in high temperature environment. Peripheral rubber design to ensure the sealing of the outer diameter; |
| Standard Double Lips      |                   | TC   |  | Peripheral rubber design to ensure the sealing of the outer diameter; suitable for various materials such as soft alloy or plastic, steel or cast iron and other materials.  |
|                           |                   | TG   | Double lips, a spring; usually used in a dusty sealing environment with a sealing pressure below 0.03 Mp a, adding additional dust-proof lips to provide protection to the main lip. | Peripheral rubber groove design, easy assembly; especially suitable for high thermal expansion material assembly hole in high temperature environment.   |
| Single lip without spring |                   | VC   |  | Peripheral rubber groove design, easy assembly; especially suitable for high thermal expansion material assembly hole in high temperature environment.   |
|                           |                   | VG   | Single lip, no spring; usually used in pressure-free, pollution-free sealing environment, especially for sealing grease.   | External rubber groove design, easy assembly; especially suitable for high thermal expansion material assembly L used in high temperature environment.   |
| Double lip without spring |                   | KC   |  | Peripheral rubber design to ensure the sealing of the outer diameter; suitable for various materials such as soft alloy or plastic, steel or cast iron and other materials.  |
|                           |                   | KG   | Lips, no springs; usually used in pressure-free, dusty sealing environments, adding additional dust-proof lips to provide protection to the main lip.                                | Peripheral rubber groove design, easy assembly; especially suitable for high thermal expansion material assembly hole in high temperature environment.   |

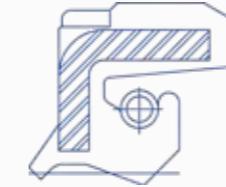

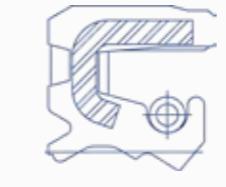

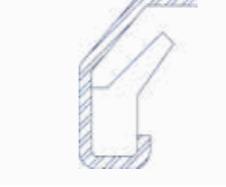

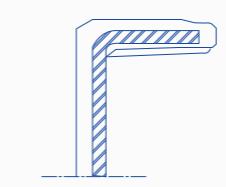

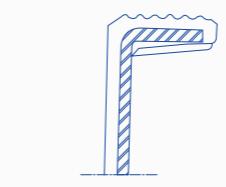

| 型式        | 结构简图  | 代码  | 主要特征用途   |   |
|-----------|---|-----|--|---|
|           |   |     | 唇部特征用途   | 外围特征用途  |
| 外骨架单唇型    |    | SB  | 单唇，一个弹簧；通常使用在密封压力低于0.03Mpa的密封环境，不适用在有任何灰尘或高污染的环境中。     | 外围铁壳设计，具有较佳的稳固及精确的装配特性；适用于钢或铸铁材质之装配孔。         |
| 外骨架双唇型    |    | TB  | 双唇，一个弹簧；通常使用在密封压力低于0.03Mpa的有灰尘的密封环境，增加额外的防尘唇部提供对主唇的保护。 | 外围铁壳设计，具有较佳的稳固及精确的装配特性；适用于钢或铸铁材质之装配孔。         |
| 无弹簧外骨架单唇型 |    | VB  | 单唇，没有弹簧；通常使用在无压力，无污染的密封环境，特别适用密封油脂。                    | 外围铁壳设计，具有较佳的稳固及精确的装配特性；适用于钢或铸铁材质之装配孔。         |
| 无弹簧外骨架双唇型 |   | KB  | 双唇，没有弹簧；通常使用在无压力，有灰尘的密封环境，增加额外的防尘唇部提供对主唇的保护。           | 外围铁壳设计，具有较佳的稳固及精确的装配特性；适用于钢或铸铁材质之装配孔。         |
| 组合式单唇型    |  | SA  | 单唇，一个弹簧；通常使用在密封压力低于0.03Mpa的密封环境，不适用在有任何灰尘或高污染的环境中。     | 外围铁壳设计，内部组合一内铁壳用以加强油封之刚性；适用于较大尺寸之油封或须由背面装配者。  |
| 组合式双唇型    |  | TA  | 双唇，一个弹簧；通常使用在密封压力低于0.03Mpa的有灰尘的密封环境，增加额外的防尘唇部提供对主唇的保护。 | 外围铁壳设计，内部组合一内铁壳用以加强油封之刚性；适用于较大尺寸之油封或须由背面装配者。  |
| 低扭力单唇型    |  | SCV | 单唇，一个弹簧；通常使用在密封压力低于0.03Mpa及低扭力的密封环境，不适用在有任何灰尘或高污染的环境中。 | 外围橡胶设计；确保外径之密封性；适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。 |
|           |  | SGV |  | 外围橡胶沟槽设计，装配容易；特别适合高热膨胀材质装配于高温环境时使用。           |

| Type                                     | Structure diagram   | Code | Main Characteristicic Uses   |  |
|--|---|------|--|--|
|  |   |      | Use of lip features  | Peripheral Character Purpose   |
| Single lip outer skeleton                |    | SB   | A single lip, a spring; usually used in a sealed environment with a sealing pressure of less than 0.03 Mpa, not suitable in an environment with any dust or high pollution.          | External iron shell design, with better stable and accurate assembly characteristics; suitable for steel or cast iron material assembly hole.  |
| Lips with outer skeleton                 |    | TB   | Double lips, a spring; usually used in a dusty sealing environment with a sealing pressure below 0.03 Mp a, adding additional dust-proof lips to provide protection to the main lip. | External iron shell design, with better stable and accurate assembly characteristics; suitable for steel or cast iron material assembly hole.  |
| Outside frame without spring Single lip  |    | VB   | Single lip, no spring; usually used in pressure-free, pollution-free sealing environment, especially for sealing grease.   | External iron shell design, with better stable and accurate assembly characteristics; suitable for steel or cast iron material assembly hole.  |
| Outside f rame without spring Double lip |   | KB   | Lips, no springs; usually used in pressure-free, dusty sealing environments, adding additional dust-proof lips to provide protection to the main lip.                                | External iron shell design, with better stable and accurate assembly characteristics; suitable for steel or cast iron material assembly hole.  |
| Combined single lip                      |  | SA   | A single lip, a spring; usually used in a sealed environment with a sealing pressure of less than 0.03 Mpa, not suitable in an environment with any dust or high pollution.          | External iron shell design, internal combination of an internal iron shell to strengthen the rigidity of oil seals; suitable for larger size oil seals or to be assembled by the back. |
| Combined lips                            |  | TA   | Double lips, a spring; usually used in a dusty sealing environment with a sealing pressure below 0.03 Mp a, adding additional dust-proof lips to provide protection to the main lip. | External iron shell design, internal combination of an internal iron shell to strengthen the rigidity of oil seals; suitable for larger size oil seals or to be assembled by the back. |
| Low torque single lip                    |  | SCV  | A single lip, a spring; usually used in a sealed environment with a sealing pressure of less than 0.03 Mp a and low torsion, not suitable for any dust or high pollution.            | Peripheral rubber design; ensure the sealing of outer diameter; suitable for various materials such as soft alloy or plastic, steel or cast iron and other materials.                  |
|  |  | SGV  |  | Peripheral rubber groove design, easy assembly; especially suitable for high thermal expansion material assembly hole in high temperature environment.                                 |

| 型式     | 结构简图  | 代码    | 主要特征用途   |   |
|--------|---|-------|--|---|
|        |   |       | 唇部特征用途   | 外围特征用途  |
| 低扭力双唇型 |    | TCV   | 双唇，一个弹簧；通常使用在密封压力低于0.03Mpa的有灰尘及低扭力的密封环境，增加额外的防尘唇部提供对主唇的保护。 | 外围橡胶设计，确保外径之密封性；适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。 |
|        |    | TGV   |  | 外围橡胶沟槽设计，装配容易；特别适合高热膨胀材质装配于高温环境时使用。           |
| 双主唇型   |    | DC    |  | 外围橡胶设计；确保外径之密封性，适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。 |
|        |   | DG    | 双主唇正反两面都装有弹簧的特殊设计；适用于需要隔离两种密封液体的环境中。                       | 外围橡胶沟槽设计，装配容易；特别适合高热膨胀材质装配于高温环境时使用。           |
|        |  | DB    |  | 外围铁壳设计，具有较佳的稳固及精确的装配特性；适用于钢或铸铁材质之装配孔。         |
| 耐压型    |  | TCN   |  |   |
|        |  | TCNY  | 唇部的受压面积小，同时保持刚性的耐压油封；可使用在不同的中压场合。                          | 外围橡胶设计；确保外径之密封性，适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。 |
|        |  | TCNG1 | 短唇长的特殊设计能更好的抵抗内部压力；特殊的材质和结构设计可应用在不同的高压场合。                  |   |

| Type                  | Structure diagram   | Code  | Main Characteristic Uses  |   |
|-----------------------|---|-------|---|---|
|                       |   |       | Use of lip features   | Peripheral Character Purpose  |
| Low torque double lip |    | TCV   |   | Peripheral rubber design to ensure the sealing of outer diameter; suitable for various materials such as soft alloy or plastic, steel or cast iron and other materials.                   |
|                       |    | TGV   | Double lips, a spring; usually used in a dusty and low-torque sealing environment with a sealing pressure of less than 0.03 MPa, adding additional dust-proof lips to provide protection to the main lip. | Peripheral rubber groove design, easy assembly; especially suitable for high thermal expansion material assembly hole in high temperature environment.                                    |
| Double main lip       |    | DC    |   | Peripheral rubber design; ensure the sealing of outer diameter, suitable for all kinds of material assembly holes, such as soft alloy or plastic, steel or cast iron and other materials. |
|                       |   | DG    | Special design with spring on both sides of both main lips; suitable for isolation of two sealed liquids.   | Peripheral rubber groove design, easy assembly; especially suitable for high thermal expansion material assembly hole in high temperature environment.                                    |
|                       |  | DB    |   | External iron shell design, with better stable and accurate assembly characteristics; suitable for steel or cast iron material assembly hole.   |
| Pressure Type         |  | TCN   | The pressure area of the lip is small and the pressure oil seal is rigid. It can be used in different medium pressure situations.   |   |
|                       |  | TCNY  |   | Peripheral rubber design; ensure the sealing of outer diameter, suitable for all kinds of material assembly holes, such as soft alloy or plastic, steel or cast iron and other materials. |
|                       |  | TCNG1 | The special design of short lip length can better resist internal pressure; special material and structure design can be used in different high pressure situations.                                      |   |

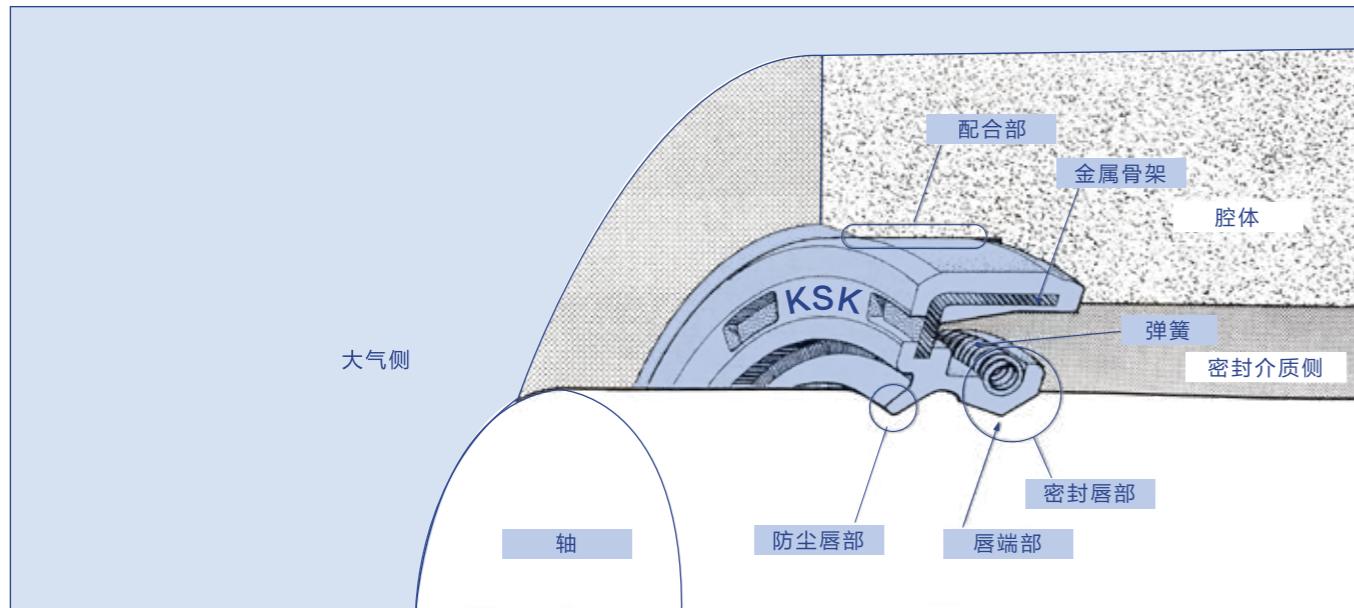

| 型式     | 结构简图  | 代码    | 主要特征用途  |   |
|--------|---|-------|---|---|
|        |   |       | 唇部特征用途  | 外围特征用途  |
| 耐压型    |    | TCNG  | 短唇长的特殊设计能更好的抵抗内部压力；特殊的材质和结构设计可应用在不同的高压场合。                   | 外围橡胶设计；确保外径之密封性，适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。               |
| 铁氟龙型   |    | TC-PL | 唇部为橡胶接着 PTFE 材质，具有极优的耐化学性、耐高低温性及低摩擦系数；应用于极高转速、耐干转之使用环境。     | 外围橡胶设计；确保外径之密封性，适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。               |
| 减震器型   |    | TC4   | 副唇半圆设计减少摩擦防止唇部变形，适用于减震器往复运动。                                | 外围橡胶设计；确保外径之密封性，适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。               |
| 双油封组合型 |   | TC4S  | 密封油侧处设有阻挡异物的唇部位，阻挡主唇部位与内部异物的正面摩擦；适用于减速机等内部有异物的密封。           | 外围橡胶设计；确保外径之密封性，适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。               |
| 轴面型    |  | RE1   | 橡胶 V 型环上增加骨架设计来加大刚性和提高抵抗尘土的能力；轴面油封安装在轴上，随着轴旋转，密封在与轴向垂直的平面上。 | -   |
| 端盖型    |  | EC    | -   | 外围橡胶设计；应用于外径密封之密封盖设计，确保外径之密封性，适用于各种材质之装配孔，如软质合金或塑料，钢或铸铁等材质。 |
|        |  | EG    | -   | 外围橡胶沟槽设计，装配容易；应用于外径密封之密封盖设计，特别适合高热膨胀材质装配孔于高温环境时使用。          |

| Type                        | Structure diagram   | Code  | Main Characteristic Uses   |   |
|-----------------------------|---|-------|--|---|
|                             |   |       | Use of lip features  | Peripheral Character Purpose  |
| Pressure Type               |    | TCNG  | The special design of short lip length can better resist internal pressure；special material and structure design can be used in different high pressure situations.  | Peripheral rubber design；ensure the sealing of outer diameter, suitable for all kinds of material assembly holes, such as soft alloy or plastic, steel or cast iron and other materials.  |
| Teflon                      |    | TC-PL | Lip is rubber followed by PTFE material, with excellent chemical resistance, high and low temperature resistance and low friction coefficient；used in extremely high speed, dry rotation environment.  | Peripheral rubber design；ensure the sealing of outer diameter, suitable for all kinds of material assembly holes, such as soft alloy or plastic, steel or cast iron and other materials.  |
| Shock absorber Type         |    | TC4   | Secondary lip semicircle design reduces friction to prevent lip deformation, suitable for shock absorber reciprocating motion.   | Peripheral rubber design；ensure the sealing of outer diameter, suitable for all kinds of material assembly holes, such as soft alloy or plastic, steel or cast iron and other materials.  |
| Double oil seal combination |   | TC4S  | -  | -   |
| Shaft Type                  |  | TCA3  | The sealing oil side is provided with a lip position to block the foreign body, which prevents the front friction between the main lip and the internal foreign body, and is suitable for sealing the internal foreign body such as the reducer. | Peripheral rubber design；ensure the sealing of outer diameter, suitable for all kinds of material assembly holes, such as soft alloy or plastic, steel or cast iron and other materials.  |
| Cap Type                    |  | RE1   | A skeleton design is added to the rubber V ring to increase rigidity and improve dust resistance；the shaft oil seal is mounted on the shaft and sealed on a plane perpendicular to the axis as the shaft rotates.                                | -   |
|                             |  | EC    | -  | Peripheral rubber design；used in the design of sealing cover of outer diameter seal to ensure the sealing of outer diameter, suitable for assembly holes of various materials, such as soft alloy or plastic, steel or cast iron. |
|                             |  | EG    | -  | Peripheral rubber groove design, easy assembly；used in outer diameter seal sealing seal cover design, especially suitable for high thermal expansion material assembly hole in high temperature environment.                      |

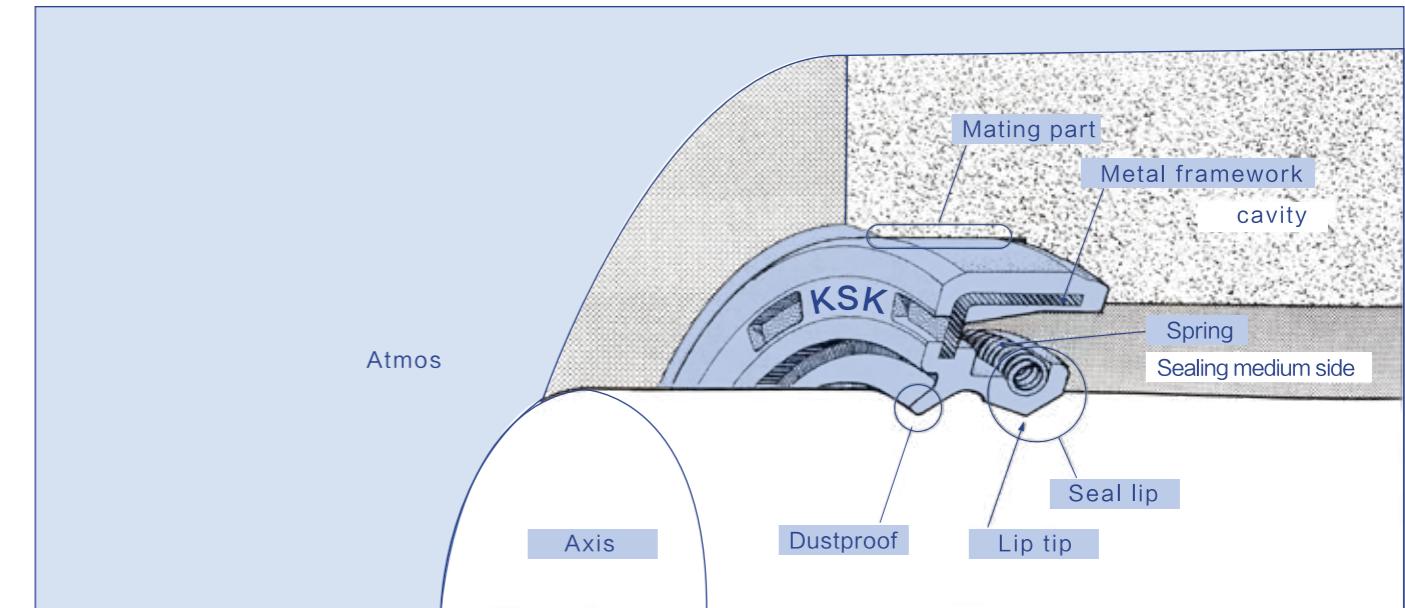

由于版面有限，还有很多型式，用于不同工况下的密封件未能全部列出，如有需求，建议和KSK公司联系。

## 油封各部位的作用

## Function of various parts of oil seal

| 各部位的作用 |     |   |
|--------|-----|---|
| 名称     |     |   |
| ①      | 唇部  | 唇端部(滑动面)<br>唇端部是斜楔形状，在端部按压轴表面，起密封流体的作用。   |
| ②      |     | 密封唇部<br>密封唇是柔性弹性体，设计上确保其在机械的振动及密封流体的压力变动的影响下仍可保持稳定的密封作用，并起保持与唇端部的轴表面的接触状态稳定的作用。另外，弹簧可提高密封唇部对轴的压紧力，起防止尘埃侵入的作用。 |
| ③      |     | 防尘唇部<br>防尘唇是没有与弹簧连接的副唇，起防止尘埃侵入的作用。  |
| ④      | 配合部 | 配合部在将油封固定于腔体孔的同时，起防止流体从油封外周面与腔体内的接触面之间泄漏及侵入的作用。另外，金属骨架起将油封固定于腔体上，保持配合力的作用。                                    |

| Role of various parts |                        |  |
|-----------------------|------------------------|--|
| Name of name          |                        |  |
| ①                     | Lips                   | Lip tip (sliding surface)<br>The lip end is wedge-shaped, pressing the shaft surface at the end to seal the fluid.   |
| ②                     |                        | Seal lip<br>The sealing lip is a flexible elastomer, which is designed to ensure that it can still maintain a stable sealing effect under the influence of mechanical vibration and pressure change of sealing fluid, and to maintain the stable contact state with the shaft surface of the lip end. In addition, the spring can improve the sealing lip pressure on the shaft, play a role in preventing dust intrusion. |
| ③                     |                        | Dustproof lips<br>Dustproof lips are auxiliary lips without spring connection, which prevent dust from invading.   |
| ④                     | Cooperation Department | The mating part not only fixes the oil seal on the hole of the cavity, but also prevents the leakage and invasion of the fluid from the contact surface between the outer surface of the oil seal and the inner surface of the cavity. In addition, the metal frame from the oil seal fixed on the cavity, to maintain the role of the combining force.  |

## CHAPTER 2 SEALING PRINCIPLE OF OIL SEAL

### 第二篇 油封的密封原理

油封的密封状态，一是油封外径和腔体之间为静态密封，同时保证油封外径在腔体之间的可靠定位；二是油封密封唇和轴之间的密封状态，当轴旋转时为动态密封，当轴静止时为静态密封。

外径静态密封是由油封外径与箱体接触面积产生干涉而达到密封效能。

油封动态密封是密封唇与轴直接接触，在油侧和空气侧间形成一层油膜，阻止油的泄漏；旋转轴唇型密封产生密封的边界润滑理论，主要是旋转轴唇型油封装配使用时，唇尖受径向力的作用与轴接触，会产生轻微的变形；密封唇部若出现较厚油膜，则会产生轴向流动而泄漏；因此，要达到理想的密封，在密封的唇和轴之间必须有一层薄而稳定的油膜，其兼具密封及润滑作用。

#### 润滑特性

油封装入机械装置后，在静止时及轴运转时主要起到密封流体的作用。另外，唇部的摩擦力小、磨损少是其重要特征之一。

对油封寿命有影响的唇口滑动面的润滑特性又如何呢？

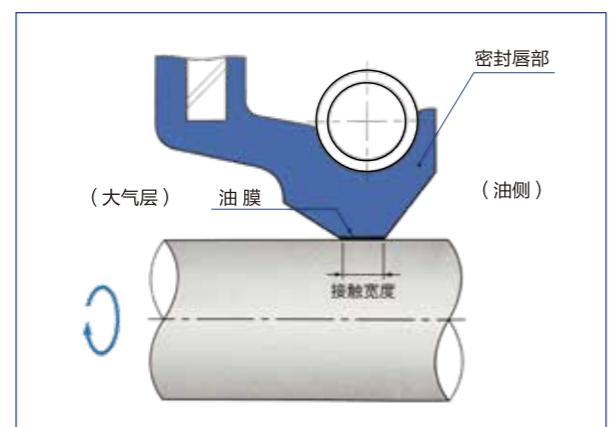

这里，我们通过宏观现象对润滑特性进行说明。

为了掌握油封的润滑状态，评价其摩擦特性是很重要的。

为此，我们在〈图·1.〉这样的状态下将油封安装在试验机上，使轴在各种条件下旋转，对其摩擦力进行了测量。

油封装上的状态

〈图·1.〉

The sealing state of the oil seal is, first, the external diameter of the oil seal is sealed statically between the oil seal and the cavity, while ensuring the reliable positioning of the external diameter of the oil seal between the cavity; Second, the sealing state between the oil seal lip and the shaft, when the shaft rotates, is sealed dynamically, static seal when shaft is stationary. The external diameter static seal is caused by the interference between the external diameter of the oil seal and the contact area of the oil seal box. The dynamic seal of oil seal is that the seal lip is in direct contact with the shaft, forming a layer of oil film between the oil side and the air side to prevent oil leakage; When the lip tip is in contact with the shaft under the action of the radial force, it will slightly deform. If there is a thicker oil film on the sealing lip, it will cause axial flow and leak. Therefore, to achieve an ideal seal, there must be a thin and stable oil film between the sealing lip and the shaft, which has both sealing and lubricating functions.

#### Lubrication characteristics

When the oil seal is loaded into the mechanical device, it mainly starts at rest and when the shaft is running. The action of sealing fluid. In addition, the lip friction is small, less wear is one of its important characteristics.

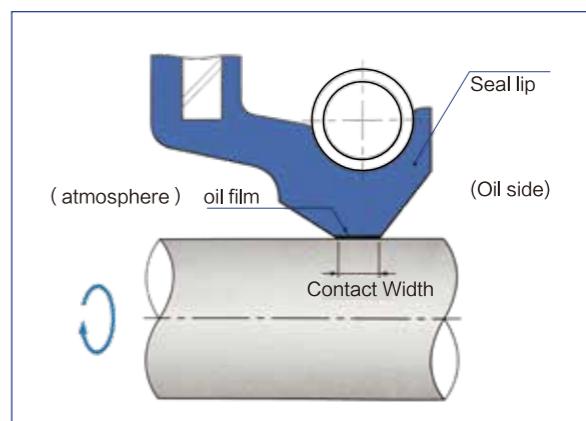

What are the lubrication characteristics of the lip sliding surface that affect the oil seal life? Here, we explain the lubrication characteristics through macroscopic phenomena.

In order to master the lubricating state of oil seal, it is very important to evaluate its friction characteristics.

Therefore, we install the oil seal on the testing machine under the condition of "Fig. 1.", so that the shaft rotates under various conditions and the friction force is carried out Measurement.

Status on oil seal

## ARTLCLE 3: MATERIAL OF OIL SEAL

# 第三篇 油封材质

### 1、橡胶 Rubber

(1) 橡胶材料通用代号与中、英文名称

(1)Universal code of rubber material, Chinese and English name

| 通用代号<br>General code | 中文名称<br>Chinese name | 英文名称<br>English code           | 通用俗称<br>Universal common name |
|----------------------|----------------------|--------------------------------|-------------------------------|
| SBR                  | 苯乙烯 - 丁二烯橡胶          | Styrene butadiene rubber       | 丁苯橡胶                          |
| CR                   | 氯丁二烯橡胶               | Chloroprene rubber             | 氯丁橡胶                          |
| EPDM                 | 乙烯丙烯橡胶               | Ethylene propylene rubber      | 乙丙胶                           |
| FVMQ                 | 氟化硅氧橡胶               | Fluorinated silicone rubber    | 氟化硅橡胶                         |
| CSM                  | 氯磺化聚乙烯橡胶             | Chlorosulfonated polyethylene  | 海波龙                           |
| HNBR                 | 氢化丁腈橡胶               | Hydrogenated NBR rubber        | —                             |
| AEM                  | 乙烯 / 丙烯酸橡胶           | Ethylene/Acrylic rubber        | VAMAC                         |
| NBR                  | 丙烯腈 - 丁二烯橡胶          | Acrylonitrile butadiene rubber | 丁腈橡胶、耐油橡胶                     |
| ACM                  | 丙烯酸酯橡胶               | Polyacrylate rubber            | 压克力橡胶、CII                     |
| NR                   | 天然橡胶                 | Natural rubber                 | —                             |
| VMQ                  | 硅氧橡胶                 | Silicone rubber                | —                             |
| PTFE                 | 聚四氟乙烯                | Polytetrafluoroethylene        | 铁氟龙                           |
| PU                   | 氨基甲酸酯橡胶              | Urethane rubber                | 聚氨酯橡胶                         |
| FKM                  | 氟素橡胶                 | Fluorocarbon rubber            | 氟橡胶、VITON                     |
| XNBR                 | 羧化丁腈橡胶               | Carboxylated NBR               | —                             |

## (2) 常用橡胶种类的特性

| 项目<br>种类 | 适用温度 |     | 特性说明   |
|----------|------|-----|--|
|          | 高温   | 低温  |  |
| NBR      |      |     | 由于其价格便宜，耐油性及耐磨耗性佳，因此是油封材料使用最多的耐油胶，特别是对矿物油系的抵抗性最佳，忌用于酮类或酯类的极性溶剂中。   |
|          | 120  | -55 | 低含腈 耐低温性增加，弹性增加，塑化剂互适性增加，用于低温性比耐油性更为重要的部位。   |
|          | 120  | -40 | 中含腈 其性质介于低、高丙烯腈聚合物之间；用于芳香类化合物含量较低或可以承受橡胶膨胀较大之处。  |
|          | 120  | -25 | 高含腈 耐油性、耐燃性、抗拉强度、硬度都增加，抗磨耗有所改善，不透气性增加；常用于极需耐油之处及其它需要抵抗芳香类燃料、油类与溶剂的用途。  |
| HNBR     |      |     | HNBR 是逐渐将 NBR 予以氢化而成，因此其具备了耐高温、耐油、耐寒、耐压缩不变形等特征，其机械性质、强度及耐磨耗均有优异的表现。  |
|          | 120  | -55 | 硫磺系统 经氢化 NBR 后改善物性，可提供比 NBR 更佳的耐热、耐油性。   |
|          | 150  | -40 | 过氧系统 HNBR 适用的温度较广约为 -40 ~ 150°C 且提供更佳的抗氧化作用及不影响制品色泽特性。   |
| ACM      | 150  | -35 | 广泛用于油封膜片，汽车零件的散热管、油冷却管，与脂肪类碳水化合物有良好抵抗性、耐候性、耐油性及耐臭氧性优，但不耐水、酸、碱等流体；其结构主要是以不饱和官能基作为主链，支链是由 ethyl acrylate(EA)、butyl acrylate(BA) 与 methoxy ethyl acrylate(MEA) 所组成。当 BA 所占越多则耐寒性越好，若 MEA 所占越多则耐油性越优异。 |
| VMQ      | 225  | -55 | 温度范围广，无双键，耐臭氧性佳，无臭无味。但机械性质差，且耐药品性不佳，价格较贵。  |
| FKM      |      |     | 耐化学药品性特优，及价格较高是两大特质，除了酮类及酯类外，可耐大部分的油及溶剂。   |
|          | 250  | -25 | 二聚物 偏氟乙烯与六氟丙烯共聚物。  |
|          | 250  | -20 | 三聚物 偏氟乙烯与六氟丙烯及四氟乙烯共聚物，较二聚物有更好的耐溶剂性。  |
| EPDM     | 150  | -55 | 对极性溶剂(醇、酮、乙二醇)、盐酸等无机药品很安定，是所有橡胶中比重最小，故可进行高填充。  |
| SBR      | 100  | -40 | 可与天然胶及合成胶混合使用，耐油性优于天然胶，机械性质很差且加硫慢，弹性低，动性发热大。   |
| PTFE     | 250  | -50 | 除了弹性较橡胶差外，几乎所有物理性能均优于橡胶，且低摩擦系数的特性常应用于油封的唇部。  |
| CR       | 100  | -40 | 耐油性仅次于 NBR，无自燃性，耐候，耐臭氧性优，长期暴露室外也不易老化，原胶储存安定性差。   |

## (2) Type character of common rubber

| Project<br>Type | Applicable temperature |                 | Characteristic description   |
|-----------------|------------------------|-----------------|--|
|                 | High temperature       | Low temperature |  |
| NBR             |                        |                 | Its price is cheap, oil resistance and abrasion performance is best, thus, oil resistant adhesive and abrasion performance is well, thus, oil resistant adhesive is frequently used for oil seal material, it has best resistance for mineral oil, it is not allowed for ketones and lipid polar solvent.  |
|                 | 120                    | -55             | Low temperature tolerance increases, elasticity increases, plasticizer compatibility increases, it is used important part for low temperature than oil resistivity.  |
|                 | 120                    | -40             | Low nitrile Its nature is between low and high acrylic polymers; low content aromatic compounds or it can bear large rubber expansion.   |
|                 | 120                    | -25             | Medium nitrile Oil resistance, flame resistance, tensile strength and hardness is improved, Air permeability increases.  |
| HNBR            |                        |                 | Gradually hydriding NBR for becoming HNBR, thus, it has high temperature resistance, oil resistance, cold-resistant, compression resistance, non-deformation feature, it has excellent mechanical nature, strength and abrasion resistance.  |
|                 | 120                    | -55             | Better heat resistance and oil resistance could be provided after improvement of NBR hydriding.  |
|                 | 150                    | -40             | Peroxide system Applicable temperature of HNBR is about between -40 and 150 °C, better antioxydation is provided. It does not affect color of products.  |
| ACM             | 150                    | -35             | It is widely used into oil seal film, cooling tube of vehicle spare parts, oil cooling tube. Have good resistance, fat and carbohydrate weathering resistance, oil resistance and excellent resistance to ozone, but not water, acid and alkali fluid; its structure is mainly based on the unsaturated functional groups as the main chain, branched chain is composed of ethyl acrylate(EA) and butyl acrylate(BA) and methoxy ethyl acrylate(MEA), when the BA for the more cold resistance is better, if the MEA for the more resistant oily more excellent. |
| VMQ             | 225                    | -55             | Temperature scope is wide and no double bonds, it has good resistance to ozone, no odor, price is expensive.   |
| FKM             |                        |                 | It has good resistance chemical drug and price is high, except ketones and lipids, it can resist against majority oil and solvent.   |
|                 | 250                    | -25             | Dimer it is co-polymer of partial fluorine ethylene and six fluorine ethylene .  |
|                 | 250                    | -20             | Trimers it is co-polymer of partial fluorine ethylene, six fluorine ethylene and four fluorine ethylene .  |
| EPDM            | 150                    | -55             | It is stable when encounter polar solvent(Alcohol, ketone), muriatic acid and other inorganic drugs, it has minimum proportion among rubbers.  |
| SBR             | 100                    | -40             | It can be used with natural rubber and synthetic rubber, its oil resistance is better than natural rubber, mechanical property is poor with low elasticity.  |
| PTFE            | 250                    | -50             | Its elasticity is more poor than rubber, almost physical property is better than rubber, it is used for lip of oil seal according to low coefficient of friction.  |
| CR              | 100                    | -40             | Oil resistance is next only to NBR, no naturality, it is weather-resistant and ozone resistance, it is very hard to aging in exposed environment.  |

### (3) 橡胶材质燃烧特性

| 材质          | NBR    | ACM  | SIL    | FKM  |
|-------------|--------|------|--------|------|
| 燃烧时烟的情形     | 黑烟     | 无烟   | 白烟     | 无烟   |
| 味道          | 恶臭     | 微香   | 微臭     | 微臭   |
| 火移开后橡胶燃烧的情形 | 大火继续燃烧 | 继续燃烧 | 小火继续燃烧 | 火熄灭  |
| 火熄灭时的情形     | 白烟     | 白烟   | 白烟     | 白烟   |
| 高温未完全燃烧的情形  | 粉末     | 粉末   | 粉末     | 粉末   |
| 灰烬的情形       | 黑色粉末   | 黑色粉末 | 白色粉末   | 灰色粉末 |

### (3) Combustion characteristic of rubber

| Material                                 | NBR                   | ACM                   | SIL                   | FKM         |
|--|-----------------------|-----------------------|-----------------------|-------------|
| Gas condition during burn                | Black smoke           | No smoke              | White smoke           | No smoke    |
| Flavour                                  | Smelling              | micro incense         | slight odor           | slight odor |
| Rubber burn when fire leave              | Keep big fire burning | Keep big fire burning | Keep big fire burning | Fire go out |
| Condition when fire extinct              | White smoke           | White smoke           | White smoke           | White smoke |
| Imperfect combustion at high temperature | Powder                | Powder                | Powder                | Powder      |
| Ash condition                            | Black powder          | Black powder          | White powder          | Grey powder |

### (4) 橡胶在不同环境中的耐性

| 橡胶材质    | NBR(丁腈) | ACM(丙烯酸酯) | VMQ(硅橡胶) | FKM(氟橡胶) |
|---------|---------|-----------|----------|----------|
| 抗撕裂性    | 良       | 一般与差之间    | 一般与差之间   | 良与一般之间   |
| 耐磨耗     | 优       | 一般        | 一般与差之间   | 良        |
| 压缩比     | 优与良之间   | 良         | 优与一般之间   | 优与良之间    |
| 回弹性23°C | 良       | 一般        | 优与差之间    | 一般       |
| 耐燃性     | 差       | 差         | 优与一般之间   | 优        |
| 耐候性     | 差       | 优         | 优        | 优优       |
| 耐水性     | 优       | 差         | 优与良之间    | 优        |
| 耐蒸气性    | 良与一般之间  | 极差        | 良与一般之间   | 良        |
| 抗臭氧性    | 一般与差之间  | 优         | 优        | 优        |
| 抗氧化性    | 良       | 良         | 优        | 优        |
| 耐酸性(稀释) | 良       | 一般与差之间    | 良        | 优        |
| 耐酸性(浓缩) | 良       | 一般与差之间    | 一般       | 优        |
| 耐碱性(稀释) | 良       | 一般与差之间    | 优        | 优        |
| 耐碱性(浓缩) | 良       | 一般与差之间    | 优        | 极差       |

★: Excellent; ●: Except for special designation, it has resistance. ◆: Except for special designation, it has not resistance; ▲: No resistance;

## 2、铁壳 Metallic casing

铁壳称之为油封的骨架，起支撑油封强度的作用，且可使油封正确完全嵌入于箱体孔内。

Metallic casing is frame of oil seal, it can support strength of oil seal, thus, oil seal can completely insert into box hole.

## 3、弹簧 Spring

弹簧的作用是使油封唇部提供一定收紧力及延长油封寿命，并依据轴的转速及轴的偏心选用适当弹簧力。

Role of spring is to provide certain tightening force and prolong life of oil seal, besides, spring force shall be used in accordance with speed of axis and eccentric action of axis.

## 4、弹簧及铁壳的材质种类及适用环境选择

Selection of material types and applicable environment for spring and metallic casing.

# 第四篇 油封的安装环境

## 1、轴的要求

为了提供您最好的旋转轴油封，我们必须要考虑轴所使用的材质、粗糙度、硬度、导角、公差和偏心。

### ( 1 ) 轴的材质

油封能在碳钢或不锈钢材质的轴上作最好的运动，应特别考虑使用热处理或氮化。在低速度时对水的密封，不锈钢的材质更适合。

### ( 2 ) 轴的表面粗糙度

轴的表面粗糙度是影响油封寿命的因素之一，故要求表面粗糙度为  $R_a 0.2 \sim 0.8 \mu\text{m}$  且在接触表面的区域范围内，不允许有任何的沟痕。

### ( 3 ) 轴的表面硬度

轴的表面硬度对油封的使用寿命也起到关键性的作用，一般不得小于 HRC45；若圆周速度超过 4 m / s 时，轴的表面硬度不得小于 HRC55。

### ( 4 ) 轴的倒角

轴的倒角能引导油封唇部进入适当位置，建议角度使用 15 到 30 度，倒角部分不允许有任何毛刺。

### ( 5 ) 轴径公差

对于轴径的公差范围，参考下表：

| 轴公差(公制)      |          |
|--------------|----------|
| 轴径           | 公差       |
| 3.00以下       | 0/-0.006 |
| 3.01-6.00    | 0/-0.075 |
| 6.01-40.00   | 0/-0.090 |
| 10.01-18.00  | 0/-0.110 |
| 18.01-30.00  | 0/-0.130 |
| 30.01-50.00  | 0/-0.160 |
| 50.01-80.00  | 0/-0.190 |
| 80.01-120.00 | 0/-0.220 |
| 轴公差(英制)      |          |
| 轴径           | 公差       |
| 4.000以下      | +/-0.003 |
| 4.001-6.000  | +/-0.004 |
| 6.001-10.000 | +/-0.005 |
| 10.001以上     | +/-0.006 |

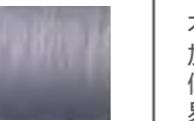

| 轴公差(公制)       |          |
|---------------|----------|
| 轴径            | 公差       |
| 120.01-180.00 | 0/-0.250 |
| 180.01-250.00 | 0/-0.290 |
| 250.01-315.00 | 0/-0.320 |
| 315.01-400.00 | 0/-0.360 |
| 400.01-500.00 | 0/-0.400 |

## ( 6 ) 轴的偏心

轴有两种偏心型式会影响油封的性能，一种是静态偏心（轴到孔的偏心量），一种是动态偏心（轴的跳动）。

## ( 7 ) 轴的表面加工方式

由图示分辨合适与不合适加工后轴表面之纹路

|   |   |   |  |
|---|---|---|--|
|  | 合适之加工方式<br>加工纹路垂直于轴线。<br>车刀面车削                                  |  | 不合适之加工方式，<br>加工纹路与轴线成一<br>倾斜角度，<br>易导致单一特定轴<br>旋转方向漏油。<br>车削后面贴砂,纸横向研磨 |
|  | 不合适之加工方式，<br>加工纹路与轴线成一<br>倾斜角度，<br>易导致单一特定轴<br>旋转方向漏油。<br>车削后抛光 |  | 合适之加工方式<br>加工纹路垂直于轴线。<br>车削后垂直研磨                                       |

## 2、孔的要求

为了油封运转的合适性，需考虑到油封装配孔的要求。主要考虑孔所使用的材质、粗糙度、倒角和公差。

### ( 1 ) 孔的材质

装配孔为铸铁和钢铁的材质时，可提供给油封外径为橡胶或金属的油封一个良好的密封表面，对于铝合金材质的装配孔，使用有橡胶外径的油封有较佳的密封能力。

### ( 2 ) 孔的粗糙度

使用铁壳外径油封的孔径表面的粗糙度为 ( 0.4~3.2 )  $\mu\text{m Ra}$  或如果是使用橡胶外径油封的孔径表面粗糙度则为 ( 1.6~3.2 )  $\mu\text{m Ra}$ 。

### ( 3 ) 孔的倒角

孔的倒角能使油封容易安装，建议角度为 15 ~ 30 度。

### ( 4 ) 孔径公差

关于孔径公差范围，参考下表：

| 孔公差(公制)       |          |
|---------------|----------|
| 孔径            | 公差       |
| 10.000以下      | +0.022/0 |
| 10.01-18.00   | +0.027/0 |
| 18.01-30.00   | +0.033/0 |
| 30.01-50.00   | +0.039/0 |
| 50.01-80.00   | +0.046/0 |
| 80.01-120.00  | +0.054/0 |
| 120.01-180.00 | +0.063/0 |
| 180.01-250.00 | +0.072/0 |
| 250.01-315.00 | +0.081/0 |
| 315.01-400.00 | +0.089/0 |
| 400.01-500.00 | +0.097/0 |

| 孔公差(英制)       |           |
|---------------|-----------|
| 孔径            | 公差        |
| 3.000以下       | +/-0.001  |
| 3.001-7.000   | +/-0.0015 |
| 7.001-12.000  | +/-0.002  |
| 12.001-20.000 | +/-0.003  |
| 20.001-40.000 | +/-0.004  |
| 40.001-60.000 | +/-0.006  |

## Article 4: Installation environment of oil seal

### 1. Requirements for axis

In order to provide best oil seal of rotary axis, we shall consider axis material, roughness, hardness, chamfer, tolerance and eccentricity.

#### (1) Material of axis

Oil seal can conduct best motion on the carbon steel and stainless steel, heat treatment and nitrogen treatment. It is more suitable for water proof and material of stainless steel with low speed.

#### (2) Surface roughness

Surface roughness of axis is one of factor for affecting life of oil seal, surface roughness shall be between R a0.2-0.8μm

There shall be no any groove mark within area of contact surface.

#### (3) Surface hardness of axis

Surface hardness of axis plays an key role in usage life of oil seal, it shall be not less than HRC45; Surface hardness of axis shall be not less than HRC55 if peripheral speed is more than 4m/s.

#### (4) Chamfer of axis

Chamfer of axis can guide lip of oil seal enter right place, it is recommended that angle is between 15° and 30°, chamfer shall be no any burr.

#### (5) Axial tolerance

Axial tolerance scope refer to below form:

| Axis Tolerance(Metric System) |           |
|-------------------------------|-----------|
| Axis diameter                 | Tolerance |
| Less than 3.00                | 0/-0.006  |
| 3.01-6.00                     | 0/-0.075  |
| 6.01-40.00                    | 0/-0.090  |
| 10.01-18.00                   | 0/-0.110  |
| 18.01-30.00                   | 0/-0.130  |
| 30.01-50.00                   | 0/-0.160  |
| 50.01-80.00                   | 0/-0.190  |
| 80.01-120.00                  | 0/-0.220  |
| 120.01-180.00                 | 0/-0.250  |
| 180.01-250.00                 | 0/-0.290  |
| 250.01-315.00                 | 0/-0.320  |
| 315.01-400.00                 | 0/-0.360  |
| 400.01-500.00                 | 0/-0.400  |

| Axis Tolerance(British System) |           |
|--------------------------------|-----------|
| Axis diameter                  | Tolerance |
| Less than 4.000                | +/-0.003  |
| 4.001-6.000                    | +/-0.004  |
| 6.001-10.000                   | +/-0.005  |
| greater than 10.001            | +/-0.006  |

### (6) Axial eccentricity

Two kinds of axis eccentricity can affect performance of oil seal, the first is static eccentricity(eccentricity between axis and hole), the other is dynamic eccentricity(axis beating);

### (7) Surface processing form of axis

Figure to distinguish the suitable and unsuitable surface texture of the rear axle

|   |  |   |   |
|---|--|---|---|
|  | The suitable processing way, the processing line is perpendicular to the axis.<br>Face turning   |  | The back of the turning is sanded and the paper is ground laterally.<br>Improper processing method, processing grain and axis into a tilt angle, easy to cause a single specific axis rotation direction oil leakage. |
|  | Improper processing method, processing grain and axis into a tilt angle, easy to cause a single specific axis rotation direction oil leakage.<br>After turning polishing |  | The suitable processing way, the processing line is perpendicular to the axis.<br>Vertical grinding after turning   |

### 2. Requirements for hole

We shall consider assembly hole requirements of oil seal, thus, we could meet for suitability of oil seal running. Mainly we shall consider hole material, roughness, chamfer and tolerance.

#### (1) Material of hole

Assembly hole is material of cast iron and steel, it can be provided for oil seal if outer diameter of oil seal is a good sealing surface of rubber or metal, as for assembly hole of aluminum alloy, The oil seal with rubber outer diameter has better sealing ability.

#### (2) Roughness of hole

Roughness of hole diameter surface is ( 0.4~3.2 ) μm Ra when iron outer diameter oil seal is used, or roughness of hole diameter surface is ( 1.6~3.2 ) μm Ra when rubber outer diameter oil seal is used

#### (3) Chamfer of hole

Chamfer of hole make installation of oil seal easily, recommended angle is between 15° and 30°

#### (4) Tolerance of hole diameter

Please refer to below figure for tolerance scope of hole diameter:

| Axis Tolerance(Metric System) |           |
|-------------------------------|-----------|
| Hole diameter                 | Tolerance |
| Less than 10.000              | +0.022/0  |
| 10.01-18.00                   | +0.027/0  |
| 18.01-30.00                   | +0.033/0  |
| 30.01-50.00                   | +0.039/0  |
| 50.01-80.00                   | +0.046/0  |
| 80.01-120.00                  | +0.054/0  |
| 120.01-180.00                 | +0.063/0  |
| 180.01-250.00                 | +0.072/0  |
| 250.01-315.00                 | +0.081/0  |
| 315.01-400.00                 | +0.089/0  |
| 400.01-500.00                 | +0.097/0  |

| Hole Tolerance(British System) |           |
|--------------------------------|-----------|
| Hole diameter                  | Tolerance |
| Less than 3.000                | +/-0.001  |
| 3.001-7.000                    | +/-0.0015 |
| 7.001-12.000                   | +/-0.002  |
| 12.001-20.000                  | +/-0.003  |
| 20.001-40.000                  | +/-0.004  |
| 40.001-60.000                  | +/-0.006  |

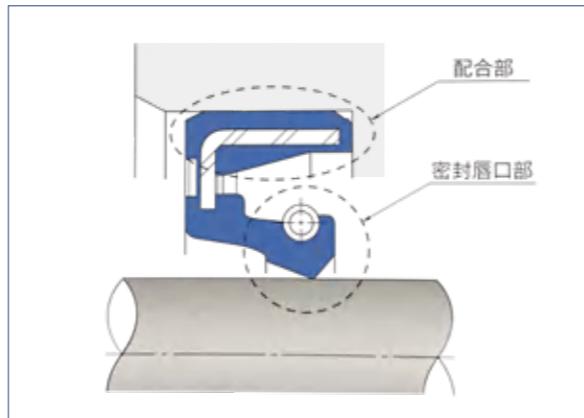

# 第五篇 油封失效分析

# The fifth part is the failure analysis of oil seal

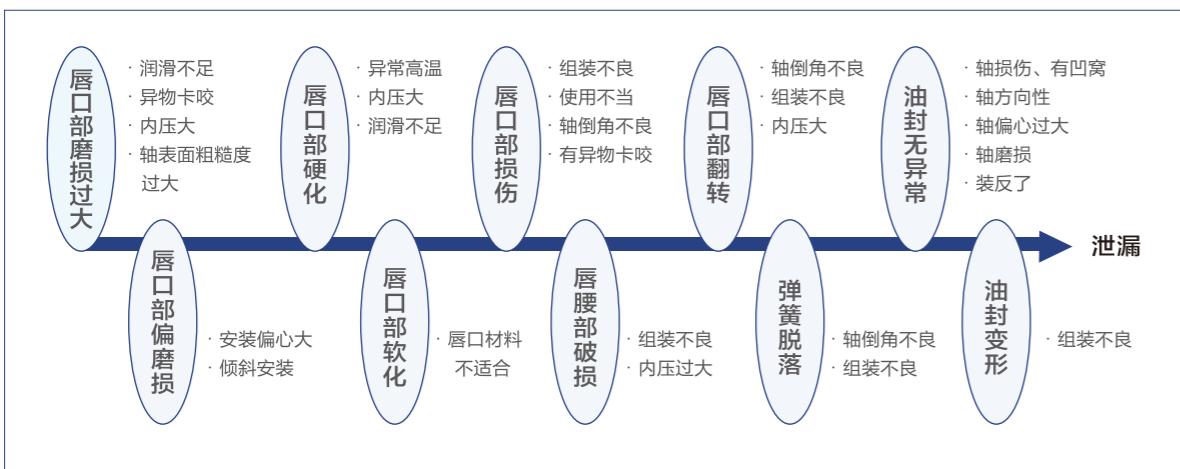

## 1、常见失效原因分析

由油封泄漏如〈图-1.〉所示，可分为由密封唇口部泄漏和由配合部泄漏两类。其各自的代表性泄漏原因见主要原因图〈图-2.〉、〈图-3.〉。

(图一) 油封泄漏的发生部位

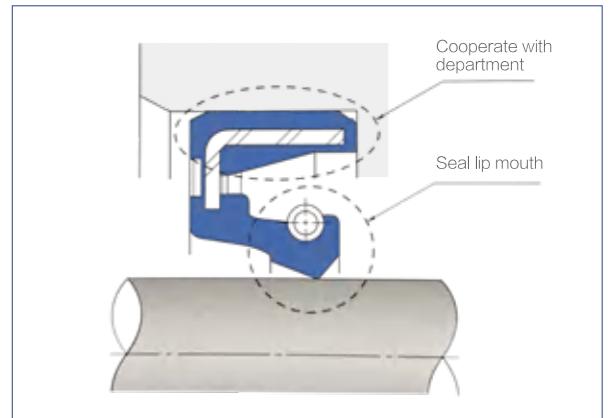

〈图-2.〉由唇口部泄漏的主要原因图

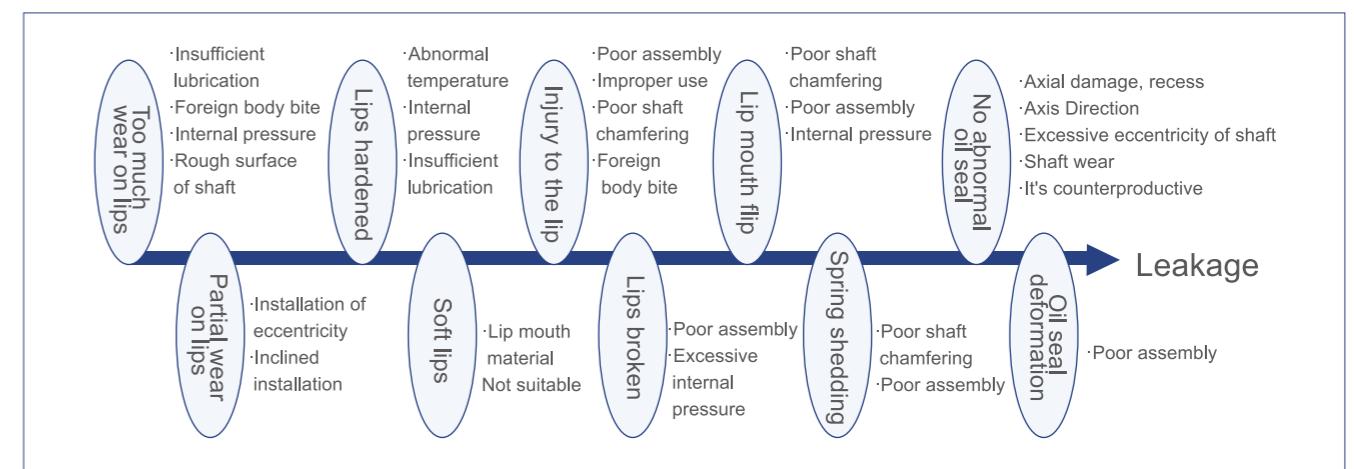

## 1. Common failure cause analysis

As shown in FIG. 1., leakage from oil seal can be divided into two types: leakage from seal lip and leakage from mating part. Their respective representative leakage causes are shown in the main cause figure < FIG. 2. > and < FIG. 3. >.

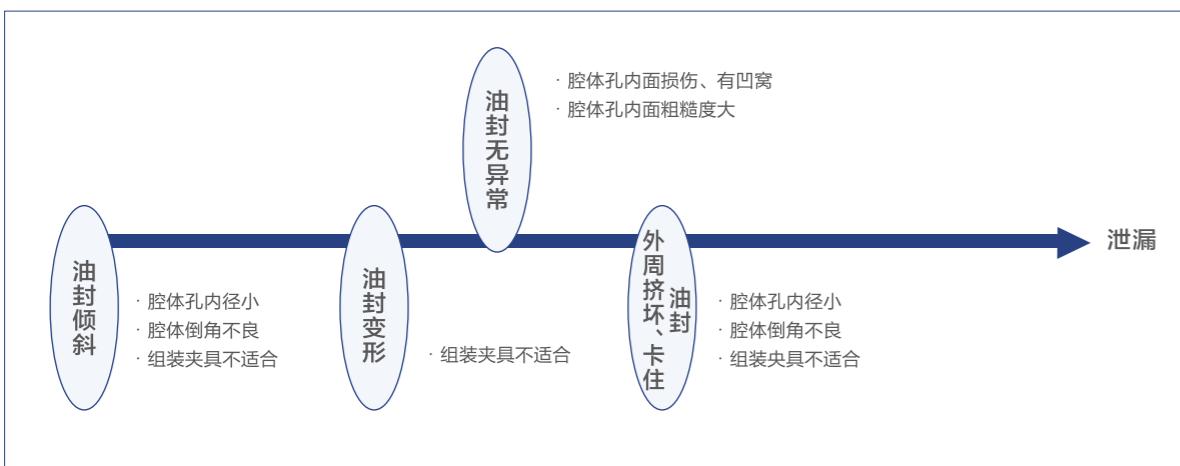

(FIG. 1) The location of oil seal leakage

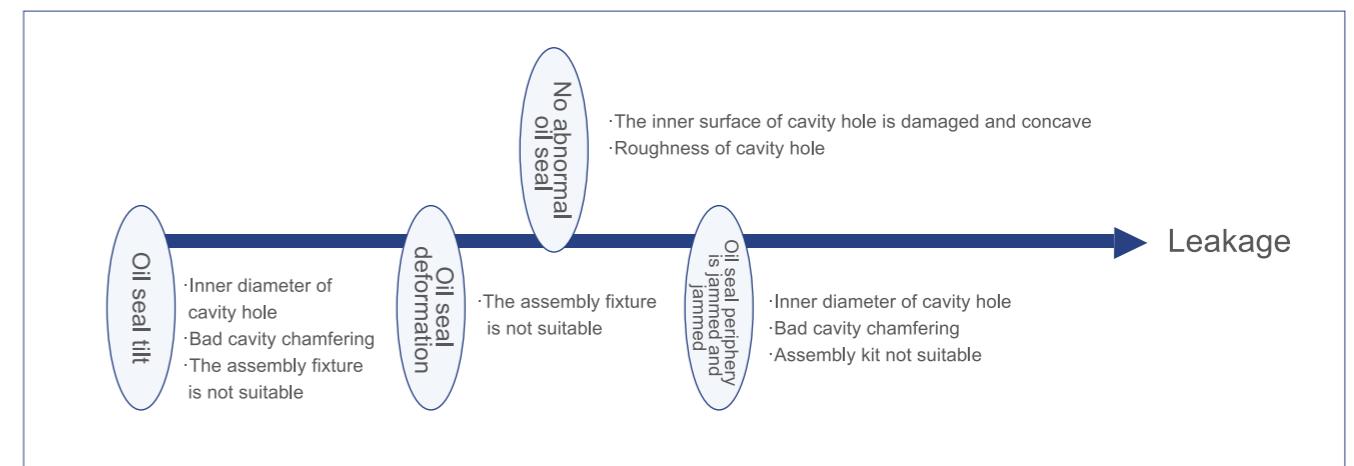

〈Figure 2.〉 Main causes of lip leakage

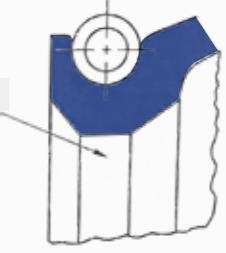

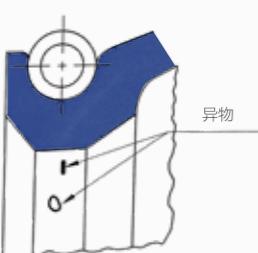

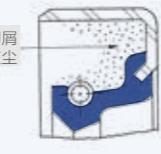

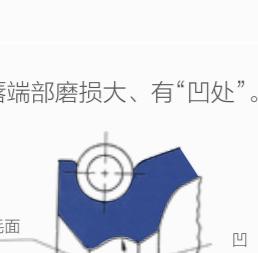

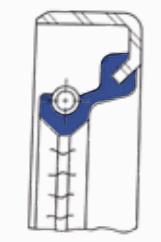

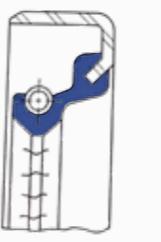

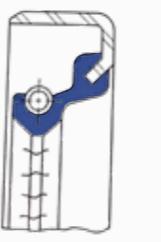

〈图-3.〉由配合部泄漏的主要原因图

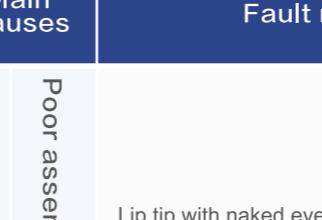

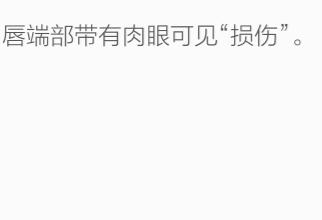

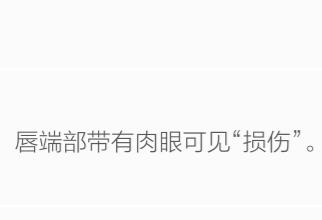

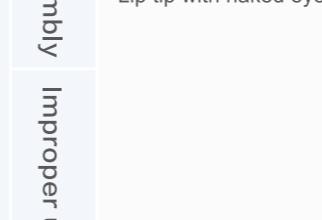

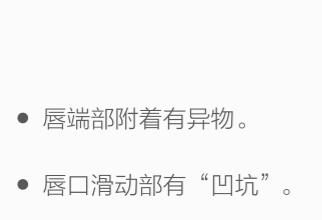

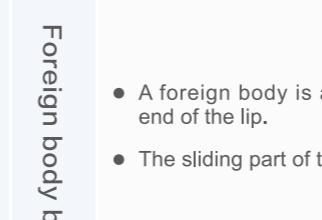

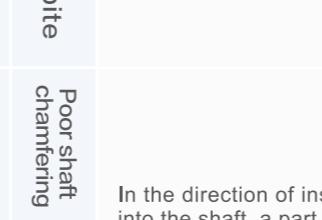

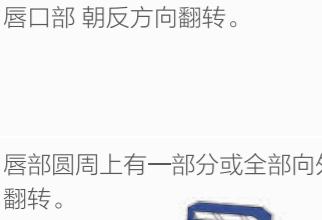

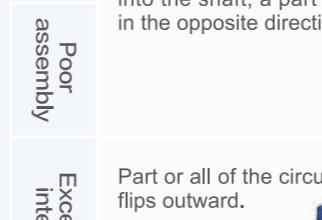

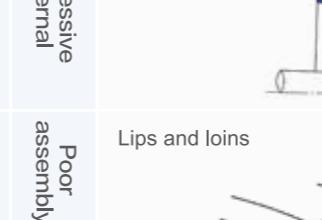

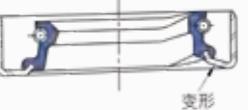

〈Fig .3.〉 Main causes of leakage by mating department

| 主要原因    | 故障模式                     | 原因   | 对策   | Main causes          | Fault mode   | Reasons   | Countermeasures  |
|---------|--------------------------|--|--|----------------------|--|---|--|
| 润滑不足    | 唇端部磨损大、磨损面失去光泽。          | <ul style="list-style-type: none"> <li>由于所使用的润滑油在指定量以下,油回不到唇口部,因而在干燥状态下滑动,产生异常磨损。</li> </ul>    | <ul style="list-style-type: none"> <li>补充润滑油达到指定量再运转。</li> </ul>   | Insufficient         | The end of the lip is worn and the wear surface loses its luster.                    | <ul style="list-style-type: none"> <li>Because the lubricating oil used is below the specified amount, the oil can not return to the lip, so it slips in the dry state, resulting in abnormal wear.</li> </ul>   | <ul style="list-style-type: none"> <li>Replenish lubricating oil to a specified amount and then run.</li> </ul>  |

| 主要原因       | 故障模式   | 原因   | 对策   | Main causes                | Fault mode   | Reasons   | Countermeasures  |
|------------|--|--|--|----------------------------|--|---|--|
| 油封倾斜安装     | [拆卸油封前]<br>● 目测可知油封相对于腔体及轴来说是倾斜的。  | ● 腔体孔尺寸明明比指定尺寸要小，却勉强将油封打进去，导致油封被倾斜安装。  | ● 使用指定的腔体孔内径尺寸。  | Oil seal tilt mounting     | ● [Before removing the oil seal]<br>Visual measurement shows that the oil seal is relative to the cavity and shaft It is inclined.   | ● The cavity hole size is obviously smaller than the specified size, but the oil seal is forced into it, resulting in the oil seal being tilted.  | ● Use the specified cavity hole inner diameter size.               |
|            | [拆卸油封后]<br>● 油封配合部的接触不均匀   | ● 腔体未进行倒角加工或不当地勉强将油封打进去，导致油封被倾斜安装。   | ● 对腔体进行倒角加工或做成适当尺寸。                                    |                            | ● [After removing the oil seal]<br>Uneven contact of oil seal fitting part   | ● Cavity not chamfered or improperly machined<br>Barely put the oil seal in, resulting in the oil seal being tilted to install.   | ● Chamfer the cavity or make the appropriate size.                 |
|            |  | ● 由于组装夹具倾斜而安装得倾斜。  | ● 改进组装夹具。  |                            | ● The installation is tilted due to the tilt of the assembly fixture.  |   | ● Improve assembly fixture.  |
| 油封变形       | ● 配合痕迹局部中断。<br> | ● 因油封组装夹具不正确而使油封发生了变形。   | ● 改进组装夹具。  | Oil seal deformation       | ● Local interruption with trace.<br>  | ● The oil seal is deformed because the oil seal assembly fixture is incorrect.  | ● Improve assembly fixture.  |
|            |  | ● 因装入了使用时产生了局部变形的油封，而使配合部产生了“空隙”。  | ● 使用时，请注意避免掉落或碰撞硬物。                                    |                            | ● The oil seal with local deformation is produced when it is loaded into use, and the fitting part produces "void".  |   | ● When using, be careful not to drop or collide with hard objects. |
| 油封配合部卡住、挤坏 | [拆卸油封后]<br>● 油封配合部轴方向上有“损伤”。或橡胶“挤坏”。   | ● 腔体孔内径尺寸明明比指定尺寸要小，却勉强将油封打进去，导致油封被倾斜安装，配合部受到了“损伤”。   | ● 使用指定的腔体孔内径尺寸。  | The oil seal fit is jammed | ● [After removing the oil seal]<br>There is "damage" in the shaft direction of oil seal fitting part ".or rubber "squeezed out".   | ● The inner diameter of the cavity hole is obviously smaller than the specified size, but the oil seal is forced into it, which results in the oil seal being tilted and installed, and the matching part is "damaged". | ● Use the specified cavity hole inner diameter size.               |
|            |  | ● 腔体未进行倒角加工或不当地勉强将油封打进去，导致油封的外周受到了“损伤”。  | ● 对腔体进行倒角加工或做成适当尺寸。                                    |                            | ● Because the oil seal is installed in the condition that the assembly fixture and the cavity are not parallel, the oil seal matching part is "squeezed out".  | ● The cavity is not chamfering or improperly forced to seal the oil, resulting in the oil seal peripheral suffered "damage".  | ● Chamfer the cavity or make the appropriate size.                 |
|            |  | ● 因在油封组装夹具与腔体未达到平行度的状态下安装了油封，而使油封配合部“挤坏”。  | ● 使组装用夹具与腔体的平行度达到要求。                                   |                            |  | ● Make the assembly fixture and cavity parallelism to meet the requirements.  |  |
| 油封无异常      | ——   | ● 安装了在腔体孔内面或油封配合部附着有切屑粉等异物的油封，而使腔体孔内面受到了“损伤”。<br>● 因反复组装与卸下油封，而使腔体孔内面受到了“损伤”。<br>● 腔体孔内面有大的凹窝。 | ● 在腔体孔内面的“损伤”、凹窝里薄薄地涂上一层液态密封胶。但注意不要使液态密封胶附着在油封的唇口部或轴上。 | No abnormal oil seal       | ● Installed inside cavity hole or oil seal fit An oil seal attached to a foreign body such as chip powder, The inner surface of the cavity hole is "damaged".<br>● Cavity caused by repeated assembly and removal of oil seals The inner surface of the body hole was "damaged".<br>● The inner surface of the cavity hole has a large concave nest. | ● Apply a thin layer of liquid sealant to the "damaged" and recesses of the cavity hole. But be careful not to attach liquid sealant to the lip or shaft of the oil seal.   |  |
|            | ——   | ● 在未去除腔体孔倒角部的“毛边”的情况下安装了油封，而使腔体孔内面受到了“损伤”  | ● 卸下油封，确认腔体孔倒角部有无“毛边”。若有，则使用金刚砂纸去除，并在腔体孔内面涂抹液态密封胶。     |                            | ● The oil seal is installed without removing the "edge" of the chamfering part of the cavity hole to make the cavity The inner surface of the hole was "damaged"   | ● Remove the oil seal and confirm that the chamfering part of the cavity hole has "edge ". If yes, use Emery Paper to remove and apply liquid sealant to the inner surface of the cavity hole.                          |  |
|            | ——   | ● 腔体孔内面粗糙度粗。   | ● 应急处理在腔体孔内面涂抹液态密封胶。<br>● 永久性对策使腔体孔内面粗糙度适宜。            |                            | ● The inner surface of the cavity hole is rough.   | ● Apply liquid density to the inner surface of cavity hole Sealant.<br>● The permanent countermeasure makes the inner surface roughness of cavity hole suitable.  |  |

# 安装方法

## Installation method

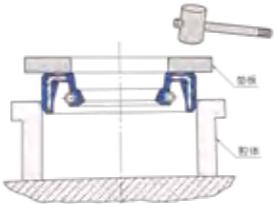

油封安装前,请确认油封唇部没有脏污并且不可让油封唇部变形或遭到破坏  
油封安装前可在油封唇部涂抹些许润滑脂(牛油)让油封唇部密封处先有些许润滑  
请小心地安装油封,并且确认清楚油封的密封面需朝向流体侧

Before the oil seal is installed, please make sure the lip of the oil seal is not dirty and do not deform or destroy the lip of the oil seal

Apply a little grease (butter) to the lip of the oil seal before the oil seal is installed. Please install the oil seal carefully and make sure that the sealing surface of the oil seal is oriented towards the fluid side

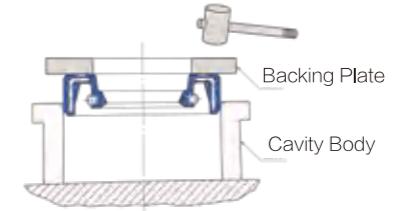

### 油封安装

安装过程中需要使用安装治具以避免油封安装歪斜建议使用油压或机械设备安装油封至孔定位。

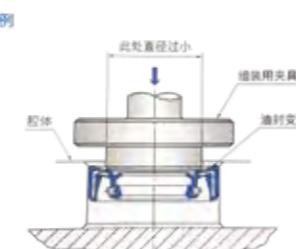

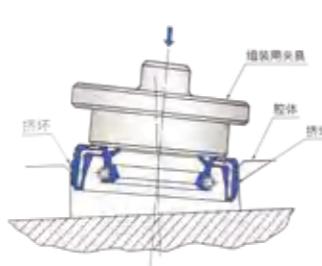

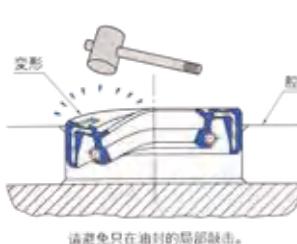

### Oil seal installation

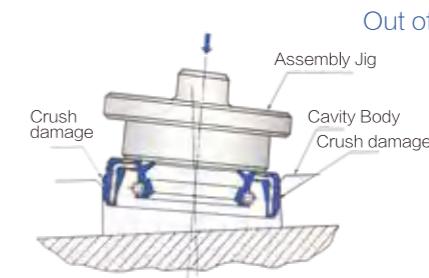

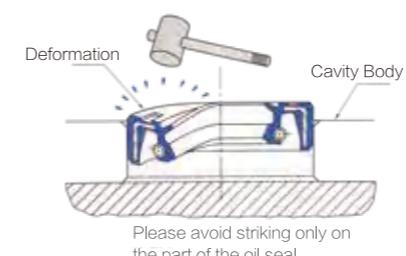

Installation fixture should be used during installation to avoid oil seal installation deviation. Oil pressure or mechanical equipment should be used to install oil seal to hole location.

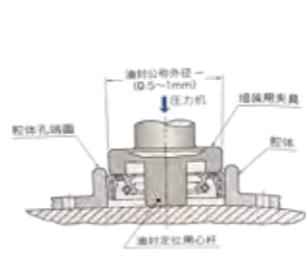

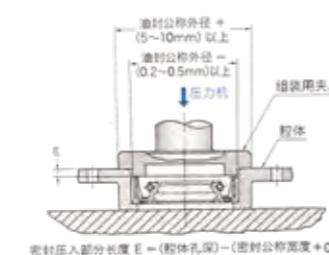

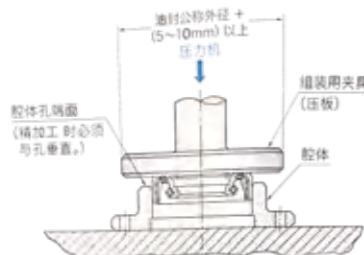

错误的安装会造成油封安装于孔时歪斜,甚至造成油封损坏而泄漏,请务必使用正确的安装工具以防止油封变形。

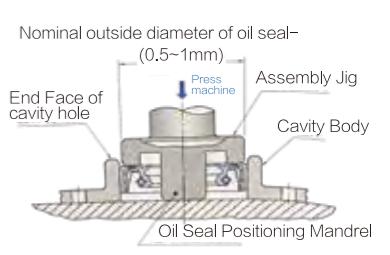

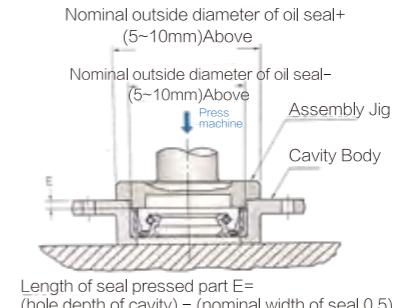

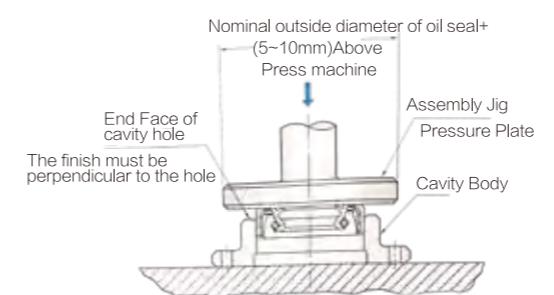

The wrong installation will cause the oil seal installed in the hole when the skew, or even cause oil seal damage and leakage, please be sure to use the right installation tools to prevent oil seal deformation.

如果使用槌子或手压台安装油封,必须使用安装治具避免油封损坏使用槌子安装油封时,请务必均匀施力于整个油封面部。

If using hammer or hand pressure table to install oil seal, must use installation fixture to avoid oil seal damage when using hammer to install oil seal, be sure to apply uniform force to the whole oil seal face.

**BUSINESS  
VISION**  
企业愿景

未来，是中国工业发展大有作为的重要战略机遇期，也是健博公司全面落实 提升战略方针的关键时期。特别是新的生产基地的全面开工，将为公司的生产经 营与实现可持续发展带来重大变化。

未来，公司产能不断扩充，产品结构不断丰富，质量发展向国际领先水平看齐，实施“精品名牌”工程，人力资源发展体现“高素质、高要求、高待遇”，增强人才的归属感和成就感，充分满足公司新事业开拓的人才需求。

健博必将成为业内领先者。

In the future, it is important strategic period of Chinese industrial development, It is also kenbo for implementing and improving strategic principle. Especially new production base is under construction, it could bring major change for corporate production business and sustainable development.

In the future, Corporate capacity could constantly increase, products structure could be enriched, development quality could reach international level, we could implement famous brand project, development of human resources reflect high quality, high requirements and high treatment, this could strengthen sense of belonging and sense of achievement for talents, this could fully meet talents requirements of business development.

Kenbo could become leading company in this industry.

曾经的一切皆为历史，未来的一切全新超越...

Former everything becomes history,  
everything could surpass history in future...
