TRACK ROLLER & CARRIER ROLLER

支重轮 & 托链轮

Machines today are increasingly operating with higher ground speeds and loads. Our roller shells undergo thorough hardening processes, and are specially forged from alloy steel to ensure extended life span and useability. Lubricated for minimum maintenance, our shafts and bearings are designed to reduce friction and provide maximum strength.

今天的机器越来越多地在更高的地面速度和负载下运行。我们的轮子经过彻底的硬化过程，并由合金钢特别锻造，以确保延长寿命和可用性。润滑降低维护费用，我们的轴和合金铜套的设计减少摩擦，并提供最大的强度。

SEGMENT & SPROCKET

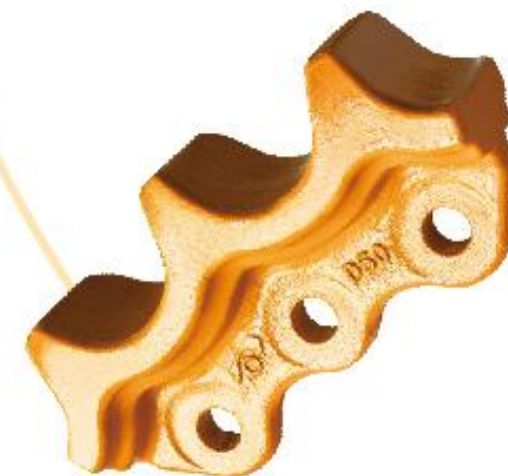

齿块 & 齿圈

Our segments & sprockets' parts are produced with the highest standards to meet stringent specifications. Our sprockets are cast using specific steel materials while the segments are forged using the finest alloy forging steels. They are manufactured to exacting tolerance and heat-treated to withstand extreme working environments. Both segments and sprockets are manufactured to accurately fit with bushings.

我们的部件是按照最高标准生产的，以满足严格的规格要求。我们的齿圈是铸造，使用特定的钢材料，而齿块是锻造的，使用最好的合金锻钢。它们按照到严格的公差和热处理生产，以承受极端的工作环境。齿块和齿圈都是制造精确以适用于链通。

IDLER

引导轮

We offer welded and steel - casted idlers that suit different machinery makes . Pre-mature failures of track rollers and chains are often due to inconsistent production methods resulting in insufficient hardness of the idlers . Thus , LianJun only selects reliable brands parts of idlers that have undergone the right degree of heat treatment on the running rail surface . This prevents premature failure and ensures extended life span of the machinery.

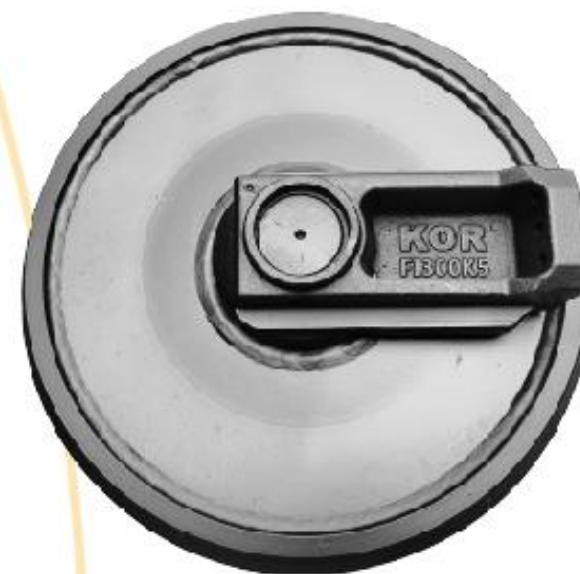

我们提供焊接和铸钢的引导轮，适合不同的机械制造。支重轮和链条的过早失效通常是由于生产方法不一致导致引导轮硬度不足。因此，联骏引导轮只选用可靠的品牌辅助件，运行轨表面经过适当热处理。这防止过早失效，并确保延长机器的寿命。
