COMPANY PROFILE

Quanzhou Zhongkai Machinery co.,Ltd.,Established in 2013,which specialised in excavator and dozer undercarriage parts,combined manufacture and trading together.Located in famous historic and cultural city——Quanzhou city

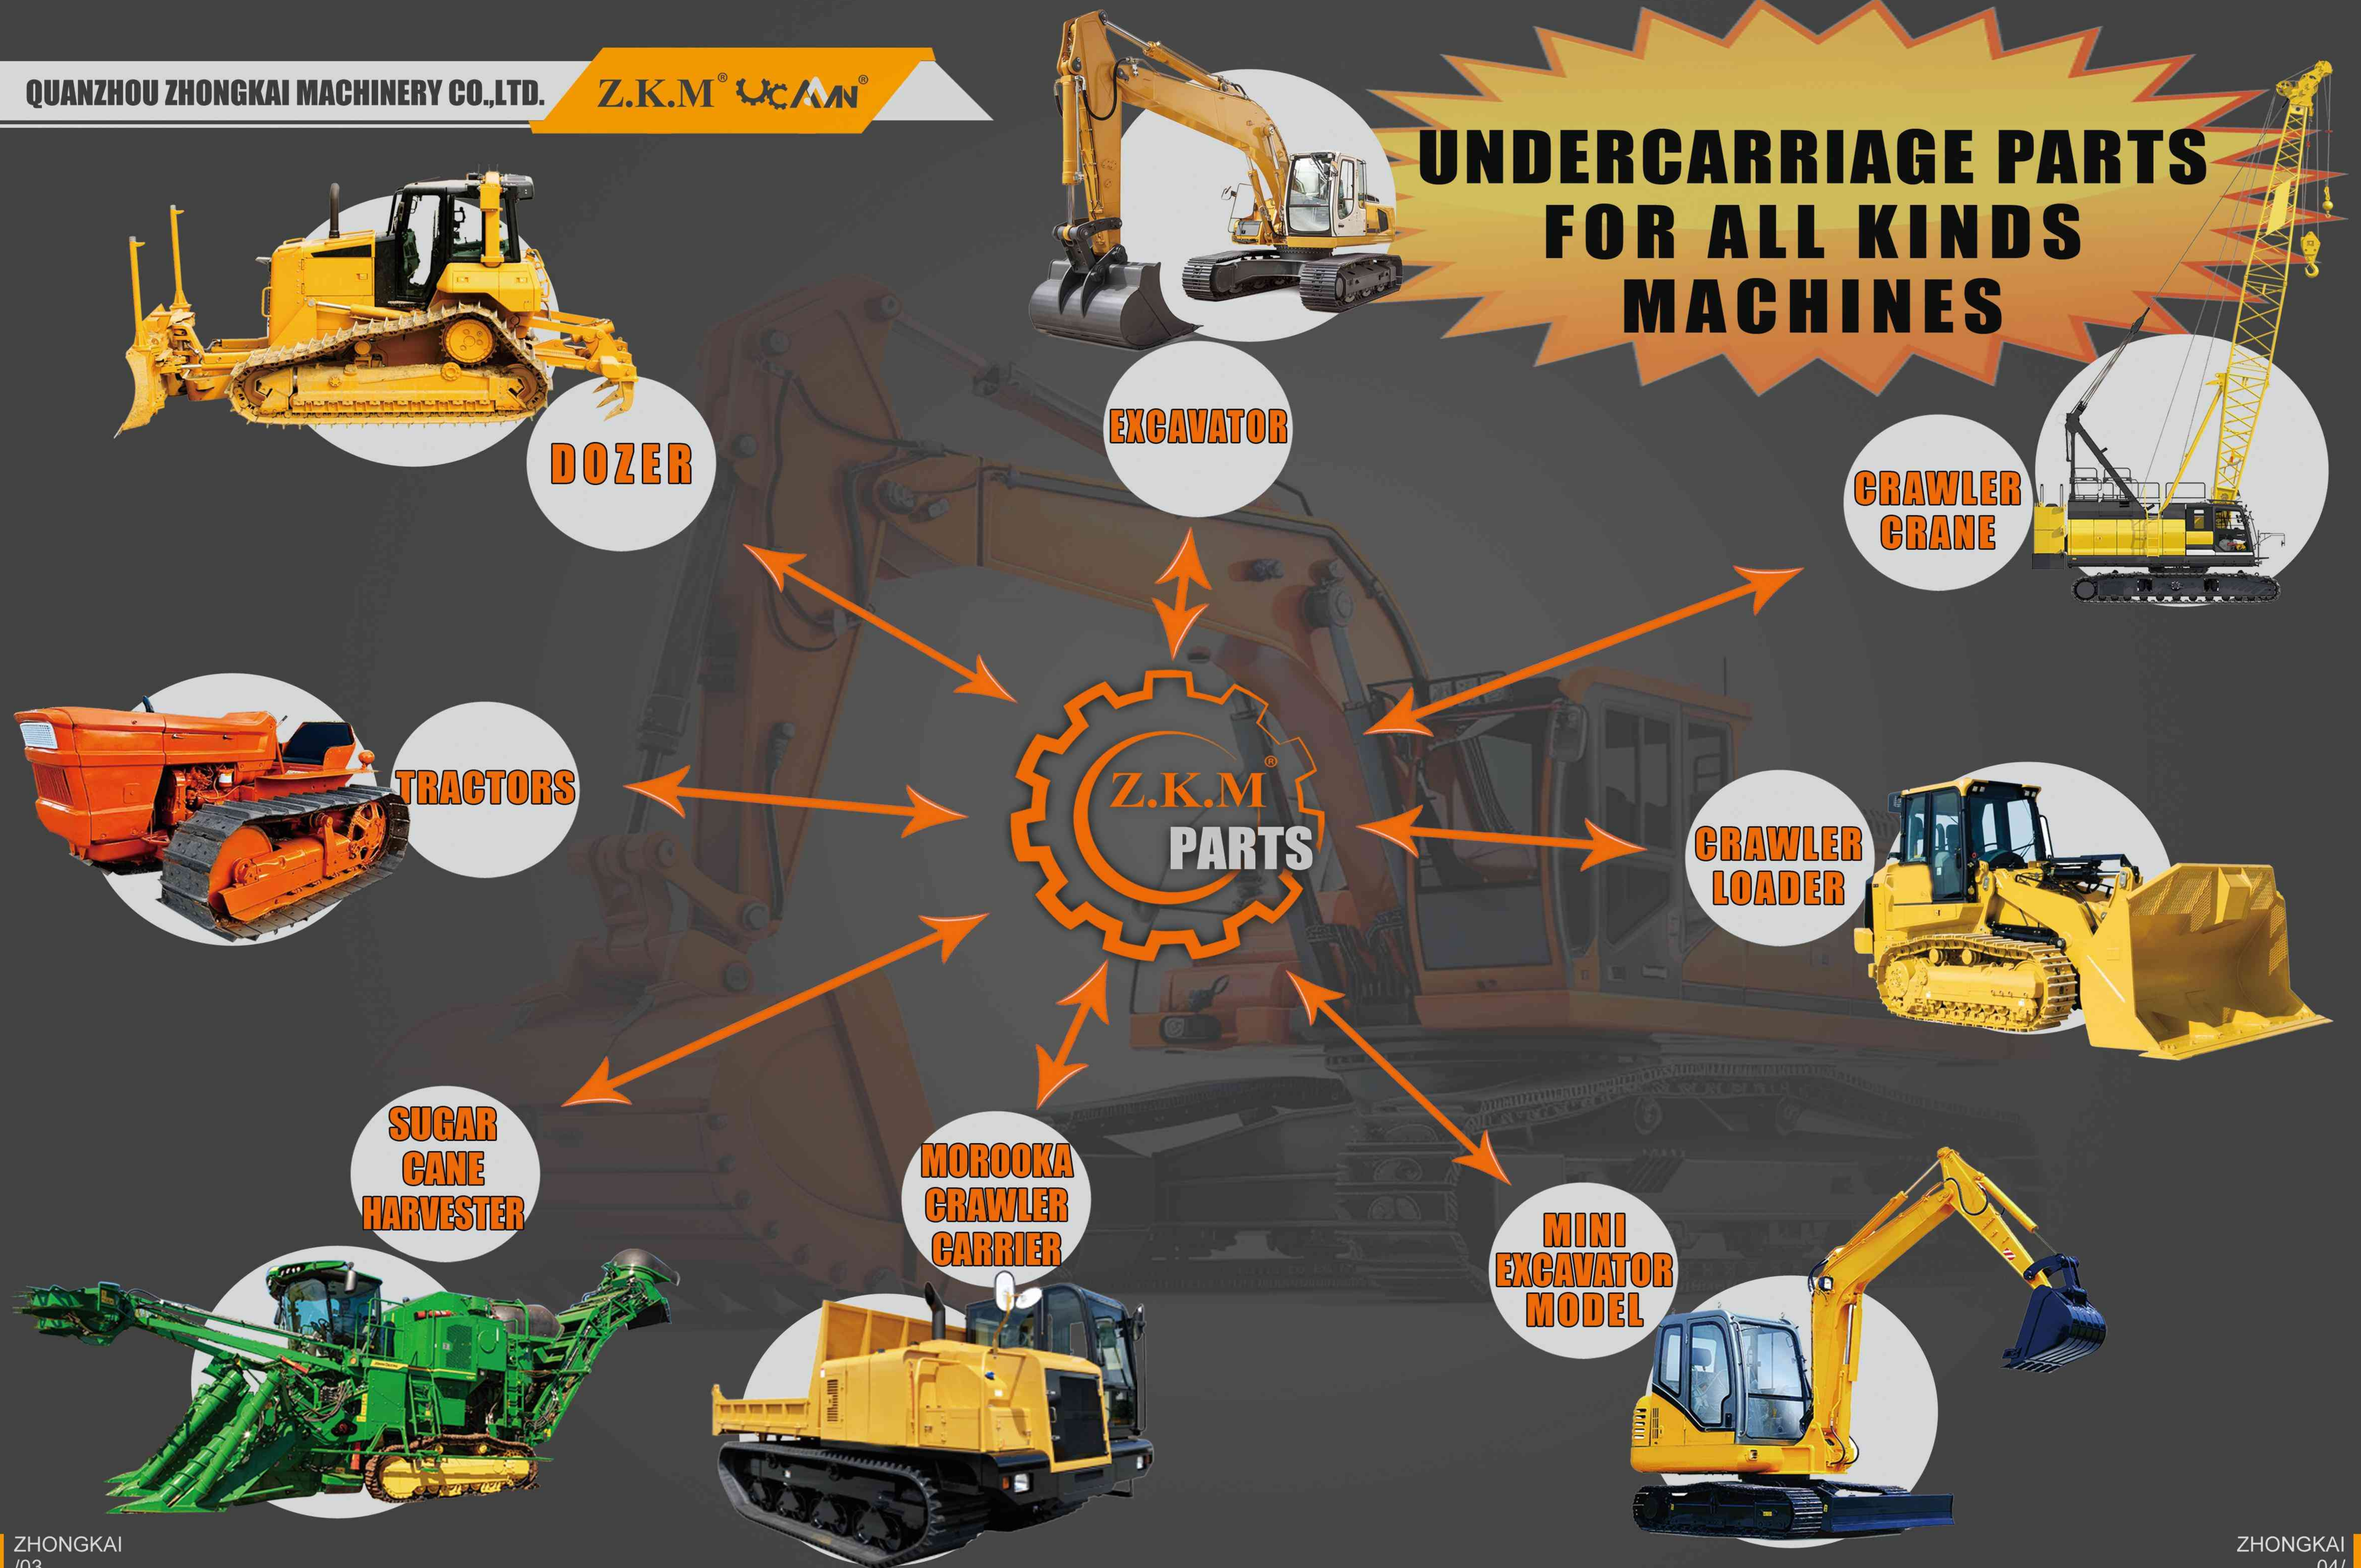

Our company is focus in manufacture undercarriage parts for both excavator and dozer:including track roller,top roller,idler,sprocket,track link,loose link and so on.It cover 30,000 square meters,combined 3 plants,track link plant,track roller plant,casting plant,forging and casting are integrated,we have scale advantage,our products are suitable for world famous construction machinery,such as HITACHI, KOMATSU, CATERPILLAR, KOBELCO, HYUNDAI, VOLVO, SUMITOMO, KATO and so on.

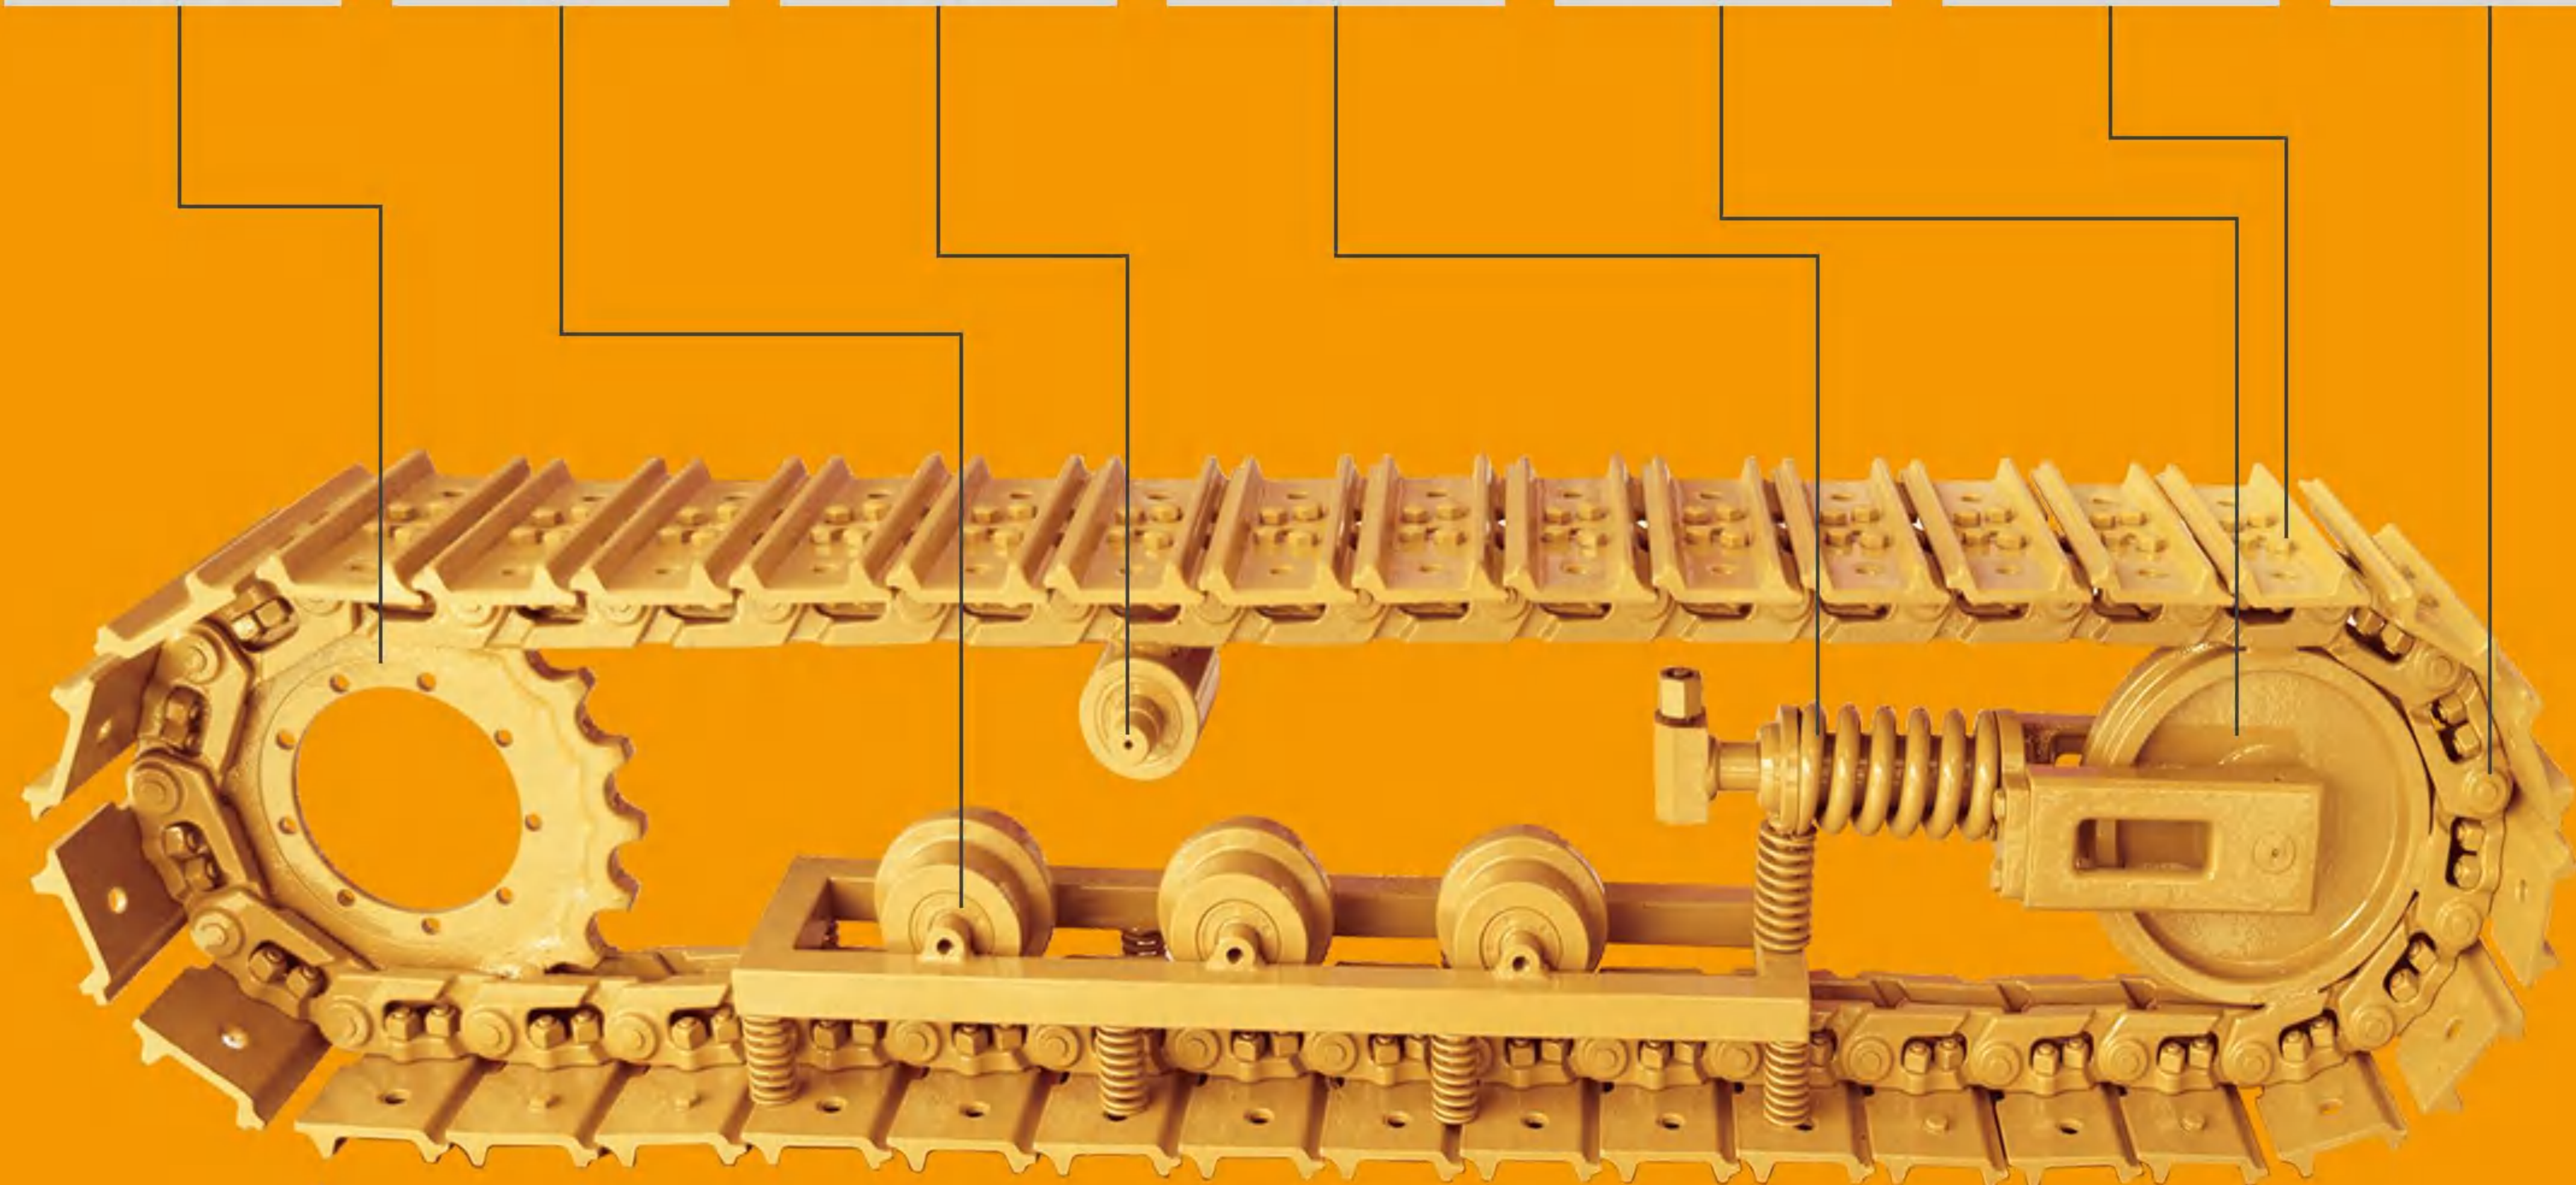

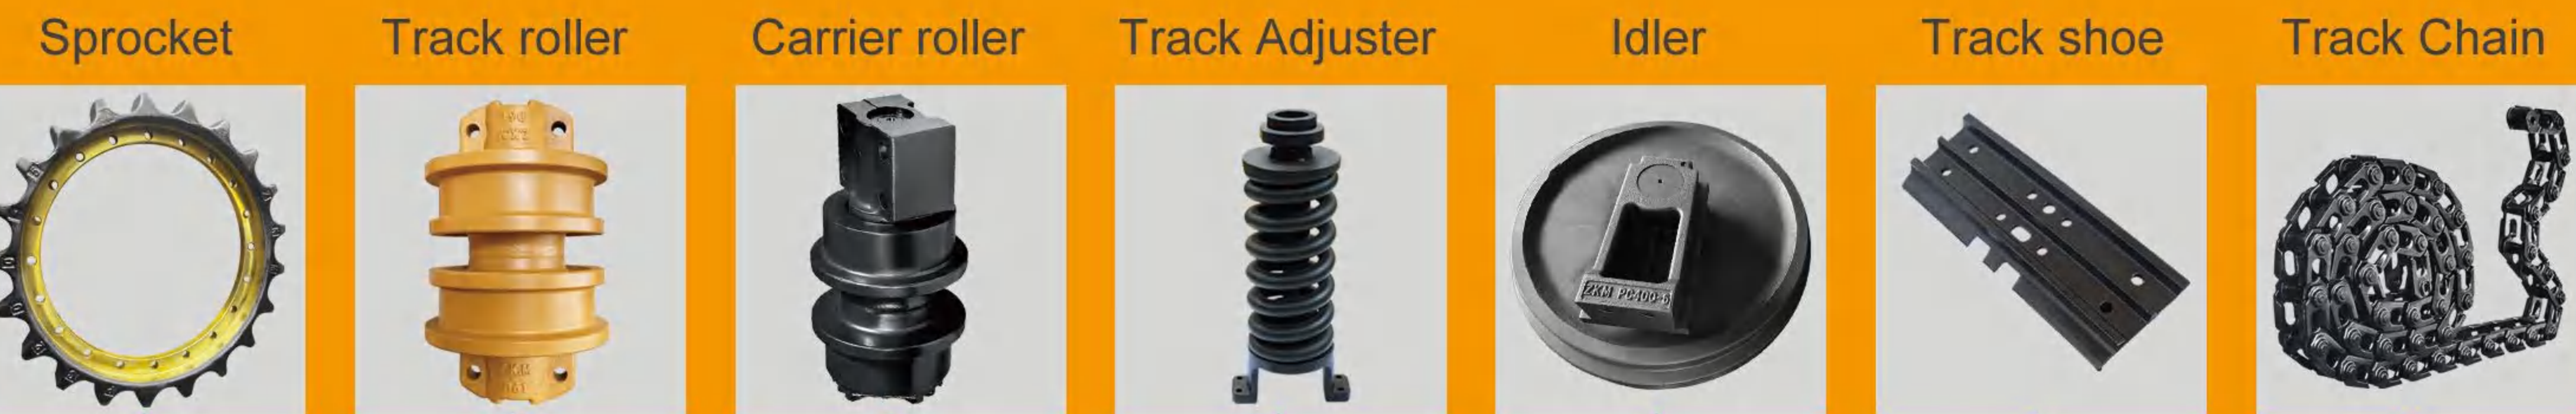

We have over 200 employees,including 30 high class engineers,we have forging machine for 1000tons,1600tons,300sets all kinds CNC machine,with advanced manufacturing technique and detection equipments,strict QC process,which can make sure our stable quality.We have many domestic distributors in the whole china,over more than 10 citys, such as Shanghai, Ningbo, Kunming, Tianjin, Guangzhou, Shenyang, Haerbin, Jinan,Hefei,Changsha,Wuhan,Chongqing,and so on,we also export to Europe,south America,Middle East, Southeast Asia and so on with high reputation.

Our main brands are “Z.K.M” and"UCMAN",we insist on our faith “credit first,quality assurance”.We absorb high technoligy from oversea, learn advanced managerial experience, analyze all feedback from our customers,to become one of the most reliable parters of our customers,strength create brand,quality achieve future,ZhongKai Machinery invite all distributors in the world to create future together.

UNDERCARRIAGE PARTS FOR ALL KINDS MACHINES

ZHONGKAI MACHINERY

Alloy Steel Of Excellent Quality

Large Scale,Precise Forging

TECHNIQUE ON FORGING AND CASTING

Forging: press into a certain shape under high temperature.Crystal grain in the forging piece can be thinned

Casting: melting metal fills mould and gets cooling,Bubble can be generated easily in the casting piece

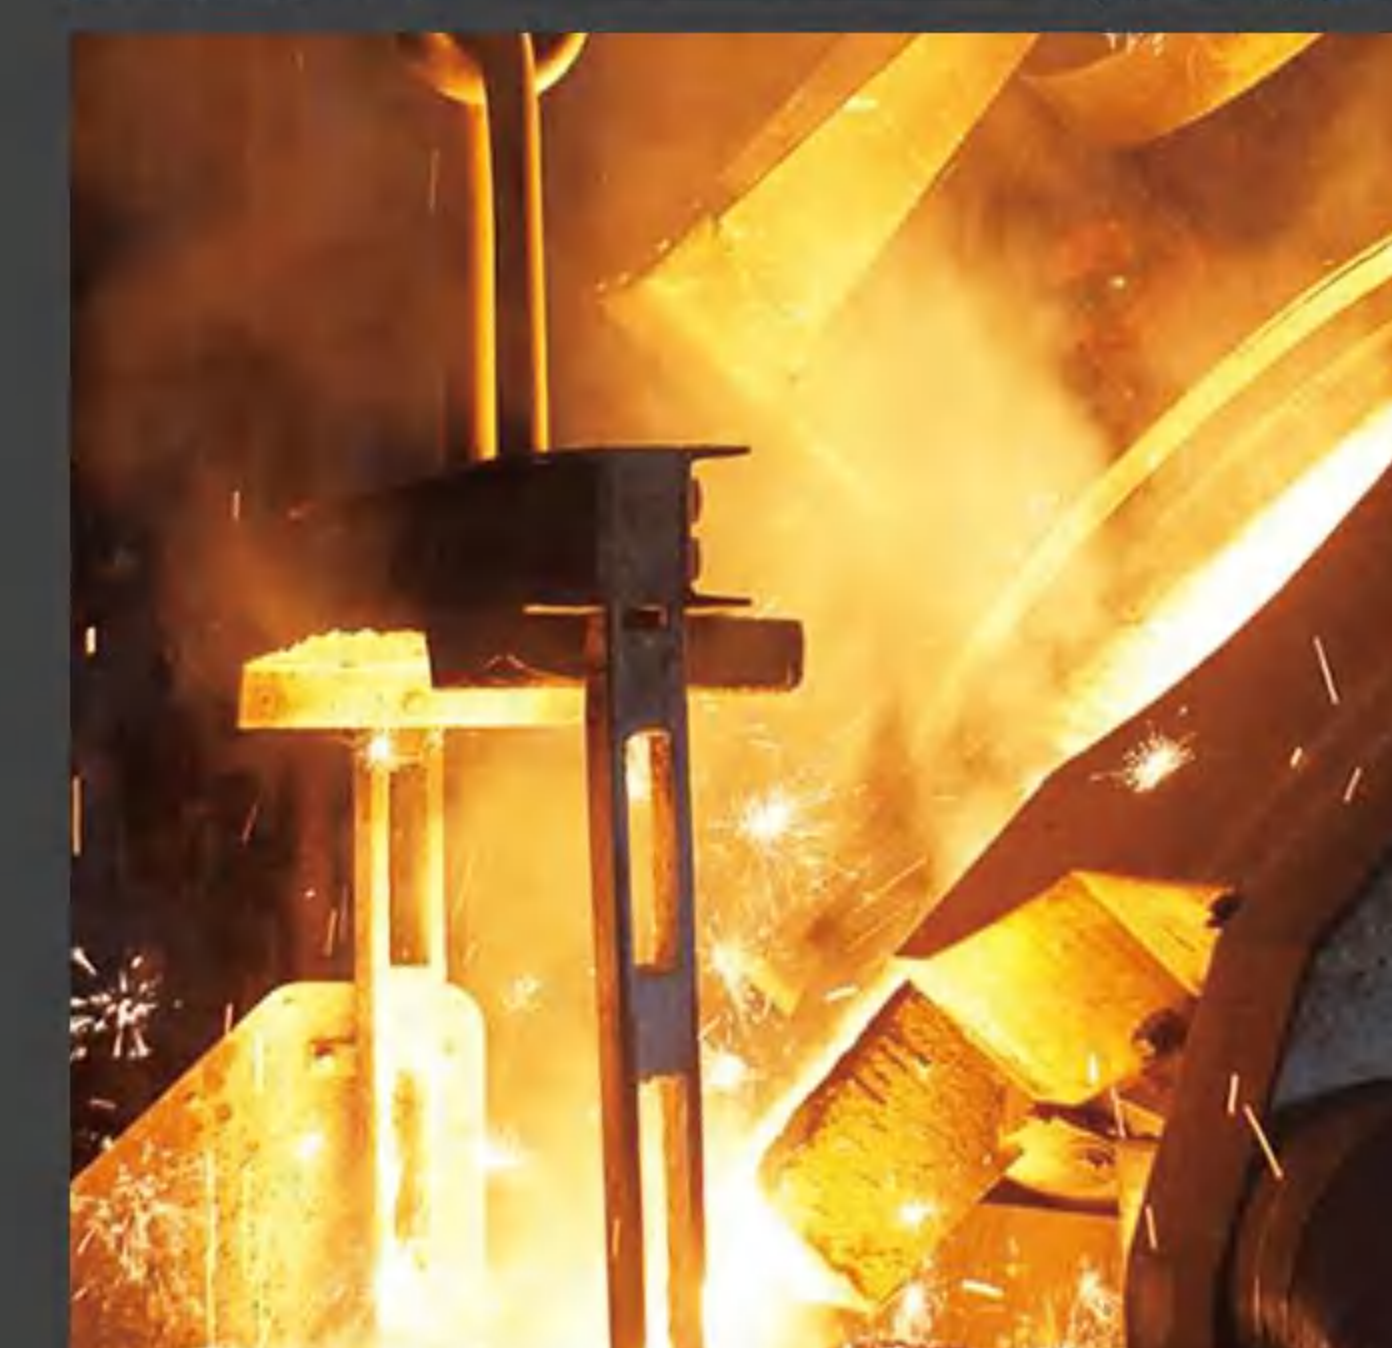

DIFFERENCES FROM PERFORMANCE

During forging, the metal undergoes plastic deformation to refine the grains, and the fibers are continuous, so it is often used in the blank manufacturing of important parts, such as shafts, gears, and so on.

Casting has requirements on the material to be processed. Generally, cast iron, aluminum, etc. have better casting performance. Casting does not have many advantages of forging, but it can manufacture parts with complex shapes, so it is often used in the manufacture of support blanks with low requirements for mechanical properties. For example, machine tool housing, etc.

Forging-----Use forging machinery to apply pressure to metal blanks to produce plastic deformation to obtain forgings with certain mechanical properties, certain shapes and sizes.

Casting-----smelting metal, manufacturing model, and injecting molten metal into model, forming method to obtain a certain shape and size after solidification.

TOP ROLLER

TOP ROLLER

The track roller with single and double flanges are suitable for special machinery such as crawler excavators and bulldozers ranging from 0.8T to 100T. They are widely used on bulldozers and excavators of Caterpillar, Komatsu, Hitachi, Kobelco, Hyundai and so on.

Double cone seal and lifetime lubrication design, so that the track roller has a long life and perfect performance under any working conditions.

The track roller body manufactured by the heat treatment process obtains an excellent internal material fiber flow distribution structure.

Differential quenching or through quenching heat treatment to ensure the certain depth of heat treatment hardening and have a good anti-cracking effect.

SPROCKET/SEGMENT

SPROCKET/SEGMENT

A wide range of Idler are suitable for special machinery such as crawler excavators and bulldozers from 0.8T to 100T

It is widely used in bulldozers and excavators such as Caterpillar, Komatsu, Hitachi, Kobelco, Hyundai, etc.

Using precise processing technology and special heat treatment technology to achieve the best wear resistance, to withstand heavy loads to the greatest extent and prevent chipping.

TRACK LINK ASSY

Link material is 35MNBH

The chain rail surface by high frequency heattreatment enhanced wear resistance

Enhancement of the wear resistance of the medium frequency heat treatment for the whole quenching and tempering of the chain link and the chain pin

TRACK LINK ASSY

A wide range of chains and lubricated are suitable for special machinery such as crawler excavators and bulldozers ranging from 0.8T to 100T. Widely used in bulldozers and excavators such as Caterpillar, Komatsu, Hitachi, Kobelco, Hyundai, etc.

Because they are made of special steel, track pin and track bushing have undergone special heat treatment to maximize the wear resistance. The chains are coated with lubricating oil and equipped with anti-dust seal to further extend the service life.

All chains are assembled from high-precision design and high-precision manufacturing parts.

TRACK GROUP

TRACK LINK

LOOSE LINK

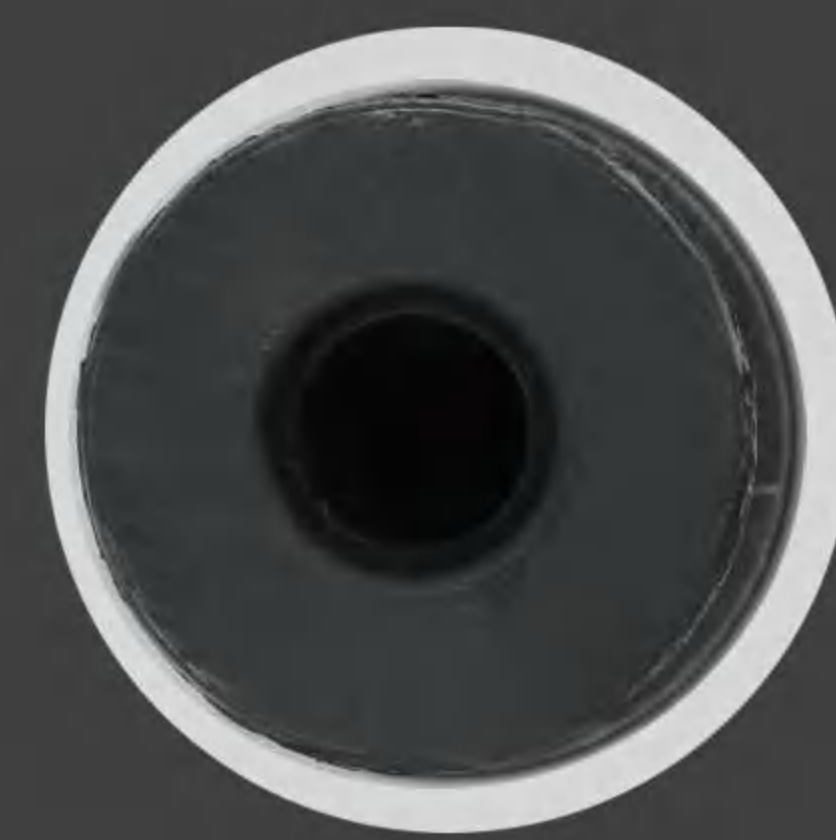

TRACK SHOE

PPR PIN POSITIVE RETENTION

We manufacture both sealed & greased and SALT track link assemblies for excavators,dozers and other crawler machines.Our sealed and greased track link assemblies are filled by grease and fitted with polyurethane seals to prevent abrasive materials from entering the internal pins and bushings for quiet operation and extended wear life.

All components (pins, bushings and forged links) are produced with precise tolerance to ensure joint integrity, perfect fit and sealing. Meanwhile, they are fully quenched & tempered and induction hardened at the rail surface of links for higher wear resistance and longer service life.Our SALT track link assemblies are filled with oil to reduce internal friction and wear between pins and bushings for extending wear life in extreme working conditions. Every joint goes through stress test to reduce the risk of leakage while operating.Sealed and Lubricated Track Link Assembly (SALT) with Positive Pin Retention (PPR)for a 50% longer life!
