

Ultimate Technology (Jiangsu) Co.,LTD

ABOUT US

Ultimate technology (Jiangsu) co.,Ltd is a collection R&D,production,sales in one of enterprises which founded in 2004. Have two modern production workshops and a series of advanced production and testing equipment. We have a number of efficient management, R&D team,willing to provide customers with professional “No leakage of worry-free” sealing solutions.

“integrity,quality” is our business purposes; “Efficient,convenient” is our service concept;

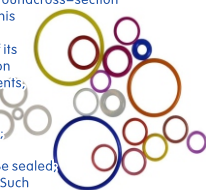

“Continued innovation and excellence” is our eternal faith. Over the years,UTMTpeople were with this spirit,the continuous development and innovation. “Quality is life” ,each is a UTMT people consensus.On this basis,the company introduced the international quality system-ISO 9001:2000 to guide the production and operation.

Though many years of UTMT people effort, our products are not only sold to the domestic areas,but also exported to United States,Brazil,Spain,Germany,Italy and other country.In front of a lot of result,UTMT people did not stop the pace of progress,willing to work together old and new customers to create brilliant!

Product introduction

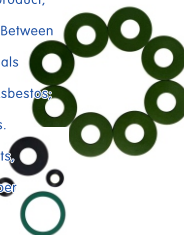

O-RING

An O-ring is a rubber compact with a round cross-section. Sealing ring, because its cross-section is O-type, it is called O-type rubber seal ring, also known as O-ring. Because of its low cost, simple manufacturing, function reliable, simple installation requirements, O-ring is the most commonly used mechanical seal design. O-ring can withstand tens of MPa of pressure. O-ring can be used for static sealing, such as hydraulic cylinder head cover seal. It can also be used for dynamic sealing, such as piston seal of impact hammer. Application is extensive; such as sanitary equipment, valves, gas dynamic components, power tools, automotive, chemical industrial and other industries.

GASKET

Rubber gasket is a kind of sheet rubber product. Seal in metal flanges or other connectors between two stationary surfaces. The main materials are NBR, FKM, EPDM, PTFE, SIL, PU, none Asbestos. There are many kinds of rubber materials. According to different sealing products, choose different materials and hard rubber material.

ED-RING

ED ring is an industrial seal that acts as pipe joints, hydraulic plugs, transition joints, etc. Pneumatic, hydraulic special seals, sealing the effect is better than traditional O-rings. This elastic seal is used as an axial static seal. Using re-threaded oil and threaded ends. The cross section remains almost constant under high pressure. Advantages: small mechanical deformation; Under pressure there is no relative motion in the force cycle; Maintain excellent sealing performance for a long time; work The pressure can reach 60MPa, and the material is diverse.

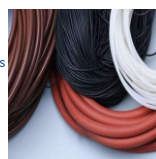

Oil seal

Oil seal is a mechanical element that seals oil. Also known as shaft lip seal. By machine oil will enter the friction part of the machine during operation. Bit, so an oil seal is used to prevent oil leaking through the cracks in the machine. However, with the development of mechanical technology, in addition to oil, you also need to prevent water and chemical liquid leakage and external dust, dirt, sand intrusion. At this time seal with oil.

Rubber strip

Rubber strip is mainly used for doors and windows of large equipment, observation mouth, inspection mouth, shaped products. Sealed shock absorption. Can be freely cut according to the size of the installed product. Cut length, easy to install and maintain. Small inventory, according to different section shape and working condition customization.

Rubber part

This part of the product is mainly non-standard customized products. We can according to the customer's different working conditions and different use requirements according to the customer drawings for developing molds and products, Max Limit to meet the needs of customers!

Scope of application

CARS INDUSTRY: for gear box, brake, protective cover, Wheel hub, pump, etc.;

BOATS INDUSTRY: used in engines, braking systems, pumps, etc.

CHEMICAL ENGINEERING INDUSTRY: Used in reactors, equipment, the main requirements of sealing ring resistance Corrosion, high temperature resistance and other properties;

ENERGY POWER: sealing of rotating parts, connecting parts, etc.

PHOTOVOLTAIC NEW ENERGY: sealing of connectors and photovoltaic

MACHINE INDUSTRY: sealing of rotating parts, connecting parts, etc.

POWER TOOLS: sealing of rotating parts, connecting parts, etc.

Product introduction

Application: The main production, sales of clean and ordinary PC,PVC,PET,PP,PS,ABS blister (vacuum forming)Trays, products for each use of electronics, hardware, tools, food, toys, gifts, crafts, cosmetics, daySupplies, etc., inside, outside packaging.

High tech/Precision Turntable

We produce PS,PVC,PP andPET
conductive or anti-static
blister trays for containing .
camera and electronic .components ,
lens and otherhigh tech products.

Electronics/Appliances

We provide all different types
of blisters for electronic and tele
communication products such as
mobile phones, batteries, lamps,
electrical toothbrushes, clocks,
watches, notepads, digital .cameras
and plugs, etc.

Beauty/cosmetic supplies

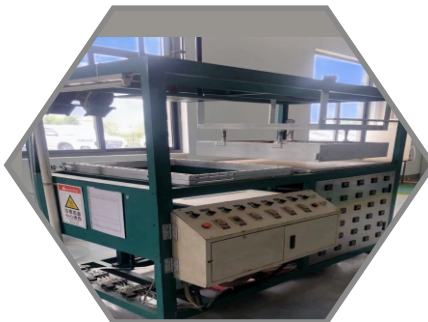

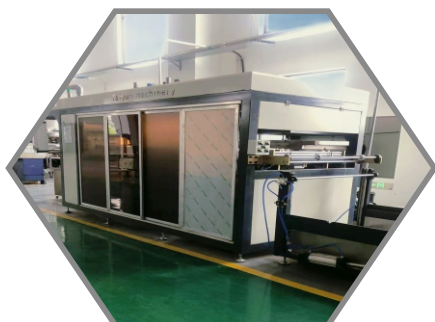

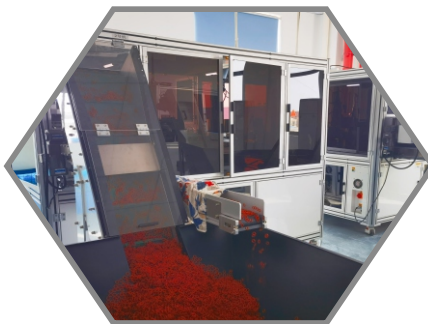

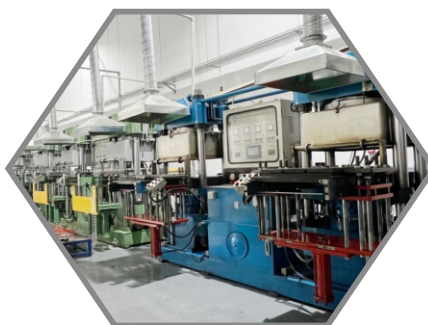

We produce blister packaging used for
containing cosmetic-s. We are the leading
blister manufacturer for many well-known
companies both at home and abroad.

Enterprise style

Production workshop

All-round one-stop service is your best choice

Ultimate Technology is a professional manufacturer of rubber parts, rubber strips, silicone gaskets and O-rings and plastic trays. The manufacturer. We have a group of efficient management, R & D team, to provide customers with professional one-stop service

Corporate culture

Integrity, quality is our business purpose;

Efficient and convenient is our service concept

Continuous innovation, excellence is our eternal belief.

Service first sincere first

Ultimate technology (Jiangsu) co.,ltd
