

BOLT-ON HALF ARROW

Bolt-on half arrows for loaders that work in multiple applications. They well protect the blade edges , and extend the serve life of the blades .

SHARP (TIGER) TOOTH

Sharp (tiger) tooth usually used in very compacted terrain , different design can guarantee to meet maximum penetration and efficient work .

有挖掘机的地方就有冠南斗齿
WHERE THERE ARE EXCAVATORS , THERE ARE GUANNAN BUCKET TOOTH

Casting experience : since 2005 year

G.E.T / Ground engaging tools / Bucket tooth / Bucket adapter / Lip shroud / Wing shroud / Heel shroud / Half arrow /Sider cutter/ Bucket segment /Bucket protector/ Ripper tooth/ Ripper protector/Ripper shank/ Cutting edge/End bit/ Pin&retainer/ Bolt&nut/ Chocky bar

STRICT QUALITY CONTROL

PENETRATION HEAVY DUTY TOOTH

Penetration heavy duty tooth is suitable for both excavators and loaders. It mainly used on compact terrain which require a lot of penetration and abrasion protection.

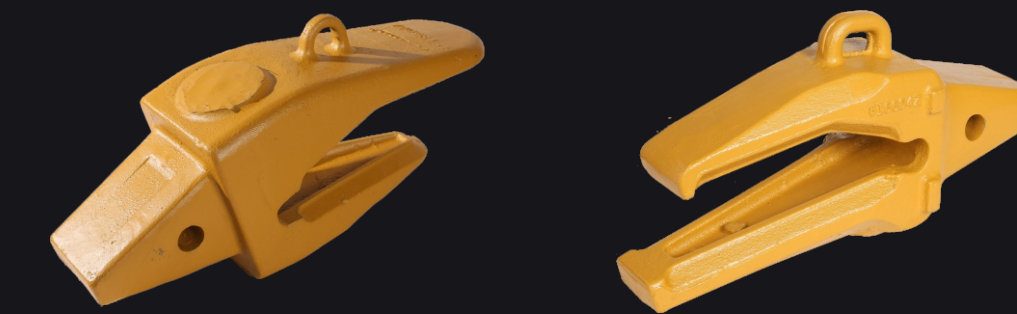

BOLT-ON TOOTH

Bolt-on tooth mainly used in wheel loader , 2 bolts-on and 3 bolts-on are most popular design , they are usually used by set (left , center , right) .

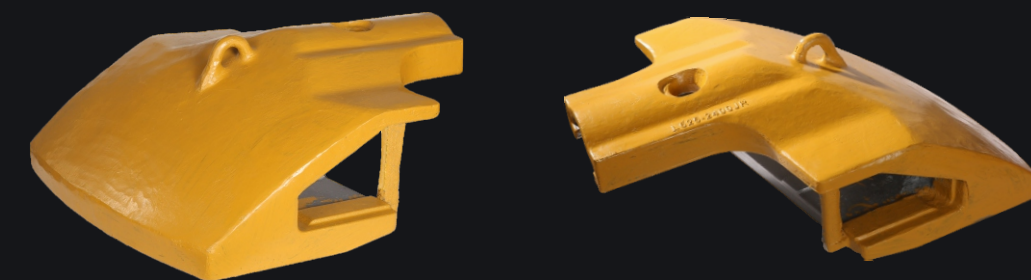

CASTING WEAR PARTS

Casting wear parts protect buckets from front , side , corner and back , they can prolong the serve life of buckets , thus reduce the down time and save cost .

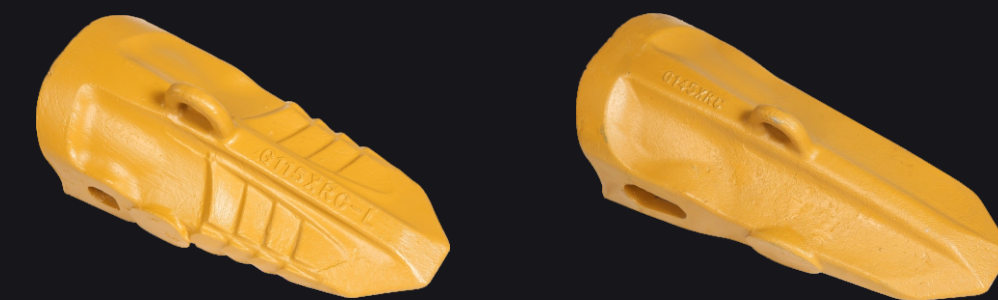

CENTER ADAPTER

Center adapter is divided into Weld-on and Bolt-on , slant opening gap and straight opening gap , excavator adapter and loader adapter .

J-BOLT LIP SHROUD

J-Bolt lip shroud are a mechanical system for quick, safe and easy assembly . Mechanical system is self-tightening to the lip, reducing wear. Installation and removal is safe and quick .

ROCK CHISEL TOOTH

Rock chisel tooth is most popular tooth design , it widely used in highly abrasive applications in various excavators .Different design can guarantee to meet maximum penetration and efficient work .

RIPPER TOOTH

Ripper tooth are mainly used to loosen hard soil, frozen soil, weathered rocks, its shape, material and structure will be optimized according to different application scenarios, can improve the operating efficiency of excavators or loaders.

CORNER ADAPTER

Corner adapter is mainly used in medium and large excavators and loaders. It can disperse the impact force generated during the excavation process, extend the service life of the bucket and improve the excavation efficiency.
