WHO WE ARE

Founded in 1995 by Mr. David Huang, KITSEN is committed to R&D and production of formwork and scaffolding products. KITSEN focuses on delivering high-performance products and engineering services to our valued clients across the globe.

KITSEN owns 3 factories with a total area of 300,000 square meters and 500 reliable workers, including 50 engineers, 20 quality inspectors, and 80 sales staff to ensure product quality and professional service

WHAT WE DO

KITSEN offers a wide range of wall and column formwork, slab formwork and scaffolding systems to meet clients' needs. Key products include:

- (1) Wall & Column Formwork System
- (2) Slab Formwork
- (3) Aluminium Tower Scaffold
- (4) Mobile Folding Scaffold
- (5) Ringlock Scaffold
- (6) Cuplock Scaffold
- (7) Shoring Prop
- (8) Customized Products

WHERE WE GO

KITSEN operates overseas subsidiaries and marketing offices in Malaysia and Dubai. Backed by experienced local professionals, we supply reliable products and prompt on-site technical support to local customers.

Meanwhile, KITSEN has established long-term business partnerships with leading global brands in the industry. With over 30 years of development, KITSEN has earned an outstanding reputation through thousands of successful projects in over 100 countries worldwide.

OUR VALUE

To build win-win cooperation with clients and provide client-oriented service.

OUR MISSION

To provide integrated construction solutions with intelligent and environmentally friendly formwork and scaffolding systems to help our customers build safely, quickly and intelligently using cost-saving construction methods. This is called the "1+N" Overall Solution.

Since its establishment in 1995, KITSEN has worked with customers from over 100 countries and regions worldwide over the course of 30 years of development. Thanks to our high-quality products and long-standing reputation, we have built long-term business relationship with the world's top-10 brand enterprises.

Comprehensive and accurate solution is the basis of safe and rapid formwork installation and operation. KITSEN engineers will work out the solution for you according to the applicable standards and criterion.

To satisfy your needs, we have developed customized formwork solutions in compliance with the building's structure, available resources, together with quality and schedule requirements to provide a customer-friendly implementation.

Our technical and engineering teams have professional training and practice regularly to provide higher quality services for every customer.

KITSEN aims to:

- Let customers rest assured: professional technologies for production and design; safe, efficient and economical solutions and products.
- Make customers happy: optimized solutions and cost-effective products to save labor, materials and time
- Keep customers free from worry: dedicated service team, customer-oriented one-stop service business philosophy.

CERTIFICATES

ISO9001:2015 International Quality System

ISO45001:2018 Occupational Health and Safety Management System

TUV Certification

CE Certification

SGS Certification

IIW International Welding Certification

All KITSEN export products are covered by CNY 30,000,000.00 in liability insurance.

With more than 30 years of development, KITSEN has obtained 2 formwork and scaffold patents in Germany and France, 4 patents for inventions in China and 186 utility model patents.

1+N INTEGRATED SOLUTION

KS65 LIGHT STEEL FORMWORK

KITSEN KS65 Light Steel Formwork is a new building formwork system. It has the advantages of a long service life, simple assembly, good stability, and high bearing capacity. The top formwork and shoring system have achieved integrated design, integrating early stripping technology into The top formwork and shoring system have an integrated design that incorporates early stripping technology, greatly improving formwork turnover efficiency. the surface quality of the concrete is very flat and smooth.

KITSEN KS65 Light Steel Formwork has a wide range of applications and is suitable for housing construction, infrastructure, urban underground utility tunnels, etc.

Advantages

KITSEN KS65 high-strength alloy formwork offers significant advantages in both construction methodology and environmental sustainability:

Process Compatibility:

Fully compatible with standard aluminum formwork construction techniques, supporting both tie-rod and tie-tab (flat tie) structural systems.

Customizable Specifications:

Customizable dimensions and profiles to meet specific client requirements, including standard panels and custom-shaped components.

Surface Durability:

Treated with anti-corrosion and anti-rust surface protection; high surface hardness minimizes damage during construction.

Structural Integrity & Precision:

Reinforced with stiffening ribs on the backside for enhanced structural stability, minimizing joints to deliver high installation precision and superior surface flatness.

Cost Efficiency:

High reusability rate significantly lowers amortized costs, delivering outstanding overall cost-effectiveness.

Slab

FEATURES & ADVANTAGES

- ✓ Easy to handle
- ✓ One-time pouring
- ✓ Great recyclable value
- ✓ Environmentally friendly
- ✓ Good concrete surface effect

High Concrete Pouring Rate

Early Stripping Theory is perfectly integrated with Kitsen KS65 Light Steel Formwork. With formwork for one floor and props for three floors, the workers will be able to complete the concrete pouring job of one floor within only 5 days.

Product Test Report

Test setup: Test a 400 × 1200 mm panel with 3 U-shaped steel sections placed above a span of 1100 mm.

NO.	Force value (Mpa)	Bearing capacity value (Kg)	Formwork intermediate deformation (mm)
1	0.4 Mpa	406 Kg	0.2 mm
2	0.8 Mpa	812 Kg	2.2 mm
3	1.2 Mpa	1218 Kg	3.8 mm
4	1.6 Mpa	1625 Kg	6.1 mm
5	2.0 Mpa	2031 Kg	10.0 mm
6	2.4 Mpa	2436 Kg	16.7 mm

Note: Meets the strength standard of Aluminum Easyform.

► Project in China

CLIMBING FORMWORK

Climbing formwork, also called cantilever template, is mainly used for bilateral formwork construction of bridge piers, concrete walls and other structures.

◎ FEATURES & ADVANTAGES

- ✓ The integrated large-panel formwork design greatly reduces the time and labor required for formwork assembly and dismantling.
- ✓ The working platform allows flexible adjustment and positioning.
- ✓ All components are automatically welded by robots to ensure high quality, stability and safety.

► Nuclear Power Station Project in Taishan, China

► Project in China

FASTFORM Formwork

The KITSEN Fastform Slab Formwork System is specially designed for buildings with large floor areas, fewer beams and different floor heights.

It is a large modular deck-shaped formwork system consisting of three main components: slab panels made with aluminium frames and 10 mm thick birch plywood, drop heads and steel shoring props. Accessories include filler beams, trusses and lock pins.

With its simple design, light weight, high efficiency and high reuse rate, the Fastform System has been widely used in projects around the world and has demonstrated its economic benefits.

◎ FEATURES & ADVANTAGES

- ✓ Fast & Efficient
- ✓ Stable & Safe
- ✓ Fast & Efficient
- ✓ High Loading Capacity
- ✓ Long-term Benefit
- ✓ Well-organized Material Management

GRIDECK

KITSEN GRIDECK is a flexible slab formwork system for quick, multi-directional adjustment. Designed for residential and multi-storey construction, this lightweight system enables fast assembly. The standard elements weigh just 20 kg. With systematic assembly, lightweight parts, and flexible sliding elements to suit all geometries, GRIDECK is a highly versatile and high-performing system with fast cycle times.

Components:

GRIDECK

	Part Name	Material	Size (mm)
	Standard Panel	Aluminum	2000*1000

SPEEDECK

Introduction:

Speedeck is a lightweight panel-beam-prop slab formwork system with an early-stripping function, which can greatly shorten construction time and reduce construction costs.

Features:

- ◆ Light weight and easy operation
- ◆ Fast forming and quick dismantling
- ◆ Early-stripping and high efficiency
- ◆ Easy cleaning and low maintenance cost

Components:

Part Name		Size (mm)
Panel		1500*750
		1500*500
		750*750
		750*500
		750*375
Part Name		Size (mm)
Main Beam		3750
		2250
		1500
Part Name		Size (mm)
Cover Strip		1500
		750
		500
		375
Part Name		Size (mm)
	Aluminum Prop KS120	800-1200
	Aluminum Prop KS250	1450-2500
	Aluminum Prop KS350	1950-3500
	Aluminum Prop KS480	2600-4800
	Aluminum Prop KS625	4300-6250
Part Name		Size (mm)
	Drophead	390*250

TOPFORM

Topform is a new lightweight formwork system specially designed around a simple concept: SIMPLICITY. It is composed of only 3 basic components: slab panels made with aluminium frames and 10 mm thick birch plywood, steel props and trusses. Its unique deck-shaped modular structure enables easy assembly and dismantling, easy transportation, storage and maintenance.

FEATURES & ADVANTAGES

- Simple & Easy**
- ✓ Only three main components: slab panel, steel prop and truss.
 - ✓ No loose components, easy to install and dismantle.
 - ✓ The adjustable panel design meets the requirements of slab areas of different sizes.
- Fast & Efficient**
- ✓ Easy installation in only 3 steps: erect the prop, hook the panel onto the prop crown, and straighten the prop. Lightweight: the largest panel measures 1.8 × 1.8 m and weighs 48.3 kg. It can be easily handled by two people.
 - ✓ Large forming area: the largest panel measures 1.8 × 1.8 m and provides a forming area of 3.24 m².

Loading Capacity	Panel Size (mm)	Allowable Concrete Thickness (mm)
	1800×1800	300
	1800×900	400
	1800×750	500
	1800×600	500
	1800×450	500
	1800×300	500
	900×900	400
	900×750	750
	900×600	1600
	900×450	1800

K20 TIMBER SYSTEM

The K20 timber system is a heavy-duty slab formwork system made with H-shaped timber beams secured with steel aligners. It can also be used vertically as wall formwork. It is widely used in bridge projects, nuclear power station projects, tunnel projects, very large shear wall projects, etc.

ALUMINIUM BEAM SYSTEM

The aluminium beam system is a slab formwork system consisting of aluminium beams, plywood panels and steel ringlock shoring props.

K80 WALL & COLUMN FORM

It is suitable for all kinds of large-scale cast-in-place concrete structure walls and columns. The modular design improves the construction efficiency and is especially suitable for occasions without lifting equipment.

It is made of aluminium frame and plywood surface panel, which is very light in weight and high instrength. It can resist concrete pressure up to 50kN/m².

The panel clamps guarantee effective and quick connection of panels. The K80 Wallform System is a complete system with fixed and hinged corners that allow walls of any shape to be formed on site.

The system is widely used in large shear wall and column construction, as well as projects involving bridge piers, dams, slope walls and retaining walls.

PRODUCT PARAMETERS		
SPECIFICATION	DATA	REMARK
BEARING CAPACITY	50KN/m ²	
TIE ROD SPACING	600X600	
PANEL WIDTH	450-500-600	
PANEL LENGTH	1200~3000	300mm increment
PANEL WEIGHT	18KG/m ²	
INSTALLATION EFFICIENCY	60m ² /worker/day	
DISMANTLING EFFICIENCY	90m ² /worker/day	
PLYWOOD LIFESPAN	50 times	
REINFORCEMENT METHOD	Fixed with formwork clamps; no aligner required	

SOLUTIONS FOR COLUMNS OF DIFFERENT SHAPES

K100 WALL & COLUMN FORM

K100 Wall & Column Form is designed by an excellent R&D team with 20 years of experience and expertise to minimize the number of components and improve site and yard efficiency. It is manufactured under strict quality control standards.

It is made with an aluminium frame and a plywood surface panel, making it very light in weight and high in strength. It can resist concrete pressure up to 60kN/m^2 .

The panel clamps guarantee effective and quick connection of panels. The K100 Wallform System is a complete system with fixed and hinged corners that allow walls of any shape to be formed on site. The system is widely used in large shear wall and column construction, as well as projects involving bridge piers, dams, slope walls and retaining walls.

► Project in USA

► Project in Myanmar

► Project in the Philippines

RETAINING WALL FORM

The lightweight aluminium-framed plywood formwork with a working platform can be used for single-sided wall construction.

Panels are easily connected to form large expanses of shuttering, while the aligners and brackets allow for precise vertical and horizontal alignment.

⦿ FEATURES & ADVANTAGES

- ✓ High Loading Capacity
- ✓ High Efficiency
- ✓ Long-term Benefit

► Project in the Philippines

FEATURES & ADVANTAGES:

Simple & Lightweight

- ✓ Large modular design with basic components such as panels, clamps and tie rods.
- ✓ The panel frame is made of 6082-T6 aluminum alloy, and the panel surface is made of 15 mm thick birch plywood.
- ✓ The standard 600 × 3000 mm panel weighs only 45 kg and can be easily carried by workers without a crane.

High Loading capacity

- ✓ The scientifically designed profile enhances stiffness and provides a high load-bearing capacity, with an allowable concrete pressure of up to 60 kN/m² for a single pour.

Safe & Efficient

- ✓ The simple, large-area design with fewer accessories makes installation and dismantling easy.
- ✓ The largest panel measures 900 × 3000 mm and enables installation and dismantling at a rate of 90-110 m² per worker per day.

Long-term Benefit

- ✓ Large modular panel design shortens the construction period and reduces material investment and labor cost.
- ✓ The birch plywood can be reused 60 times using both sides and then replaced with a new sheet.
- ✓ The aluminum frame can be reused 300 times and has a 30% return rate.
- ✓ The smooth concrete surface after dismantling reduces the cost of subsequent plastering.

Well-organized Material Management

- ✓ Modular panels and standardized components can be neatly arranged and stored in the warehouse or on the job site to save space and keep the site clean and tidy.

K120 WALL & COLUMN FORM

K120 Wall & Column Form is designed by an excellent R&D team with 30 years of experience and expertise to minimize the number of components and improve site and yard efficiency. It is manufactured under strict quality control standards.

SOLUTIONS FOR COLUMNS OF DIFFERENT SHAPES

L-Corner

T-Corner

Column Assembly
(Wall End Type)

PHENOLIC COATED PLYWOOD

- ✓ Sturdy multi-layered board of cross-glued birch wood, 15mm thick.
- ✓ Double-sided phenolic resin sealing [220 g/m²]
- ✓ Edges sealed with water-resistant varnish
- ✓ Smooth surface for superlative concret results
- ✓ Excellent strength-to-weight ratio; simple recycling

SOLID-PLASTIC PLYWOOD (ALKUS)

- ✓ Alkus solid plastic plywood, 15mm thick
- ✓ No moisture absorption
- ✓ More than 1000 applications
- ✓ No shrinking, swelling or rotting
- ✓ No rippling or discolouration of the concrete
- ✓ High UV resistance and abrasion resistance
- ✓ High resistance to acids, alkalis and chemicals
- ✓ Easy nailing & simple repairs
- ✓ Perfect fair-faced concrete quality
- ✓ Easy and fast cleaning using a high-pressure cleaner

4.5m Floor Height Solution

ALUMINIUM FORMWORK

KITSEN EasyForm is the result of years of dedicated product research, development and testing by KITSEN. It allows for monolithic pouring of all walls, slabs and staircases to suit any housing project. Its inherent simplicity is what makes the KITSEN EasyForm an efficient, safe and cost effective alternative to extremely heavy steel forms. It can either be assembled entirely by hand or be fully preassembled and then lifted into position by crane. Compared to conventional forms, KITSEN EasyForm can increase the jobsite efficiency by 1/3 to 1/2.

FEATURES & ADVANTAGES

- ✓ Easy to handle
- ✓ One-time pouring
- ✓ Great recyclable value
- ✓ Environmentally friendly
- ✓ Good concrete surface effect

► Project in Jamaica

► Project in China

► Project in South Sudan

SELF-CLIMBING PLATFORM

The Self-Climbing Platform is suitable for high-rise buildings and super high-rise shear wall structures. This system integrated with the climbing mechanism requires only one-time installation and lifting. Its built-in safety screen design can effectively prevent workers and objects from falling when working at height. The self-climbing system also helps to reduce reliance on cranes and scaffold erectors.

◎ FEATURES & ADVANTAGES

- ✓ Nonflammable all-steel materials reduce the risk of fire accidents.
- ✓ A fully enclosed working environment greatly reduces the risk of accidents caused by falling objects.
- ✓ The system has a platform on each level to allow construction work to proceed simultaneously.
- ✓ An intelligent control system with anti-tilt protection and automatic overload alarm and braking functions.
- ✓ 90% of the standard components can be reused for the next project.
- ✓ With the automatic lifting mechanism, the system can climb one floor in half an hour.

STEEL PROP

ALUMINIUM PROP

KS120 SERIES ALUMINIUM PROP

SHORING PROP

Our prop range consists of aluminium props and steel props. All props are designed to meet the increasing demands in the construction industry for safety, strength, durability and speed. They are versatile enough for use in many different applications, including shoring in difficult-to-reach areas, re-shoring, back shoring, renovations, retrofitting and any new construction requiring use of strong vertical supports.

⦿ FEATURES & ADVANTAGES

- ✓ Safe and strong.
- ✓ High load capacity allows fewer props to be used, reducing material and labor costs.
- ✓ Various designs and load ratings meet different job requirements.

Φ48/Φ60 STEEL RING-LOCK SHORING SYSTEM

The steel ring-lock system is one of the most effective shoring systems for almost all kinds of building or infrastructure projects. Depending on the load capacity requirements, Φ48 and Φ60 ring-lock posts can be used as shoring posts. It offers advantages in flexibility, ease of operation and durability compared with other shoring systems.

◎ FEATURES & ADVANTAGES

- ✓ High loading capacity
- ✓ Easy assembly & dismantling
- ✓ Efficient & cost-effective
- ✓ Tested safety and strength
- ✓ Long lifespan

SHORING FRAME

The KITSEN shoring frame system has been an industry workhorse around the globe for decades and has been used on many high-profile projects, such as athletic stadiums and high-rise commercial buildings.

◎ FEATURES & ADVANTAGES

- ✓ Easy assembly&dismantling
- ✓ Fast erection
- ✓ High-strength steel tubing
- ✓ Safe, durable
- ✓ Customization requests accepted

20K HEAVY-DUTY ALUMINIUM SHORING FRAME

Great Strength: Tested up to 20,000lb(9,091kg) per frame.

Fast and Efficient: Modular structure with only 4 basic components enables easy and fast handling on the jobsite.

20K STEEL SHORING FRAME

- ✓ Lightweight — Easy for a single worker to handle.
- ✓ Great strength — Tested up to 10,000lb(4,545kg) per frame.
- ✓ Various sizes are available to meet your specific job requirements.

Wide Applications

- ✓ Heavy-duty falsework
- ✓ Bridges and tunnels
- ✓ Commercial and industrial buildings

RINGLOCK SCAFFOLD

Ringlock scaffold is a multi-directional scaffold built for increased strength, versatility and usability. It provides access for most maintenance, cleaning and decoration works especially for complicated structures at great heights.

◎ FEATURES & ADVANTAGES

- ✓ Easy to Handle
- ✓ Tested Strength and Safety
- ✓ Versatility
- ✓ Long Lifespan

The Aluminum Ringlock Scaffolding System is an all-round, multi-directional aluminum alloy scaffold. This system, which is much more flexible than portal frame scaffold, provides access for most maintenance, cleaning and decoration works especially for complicated structures at great heights

Easy to Handle

- ✓ The whole system requires no extra tools or loose fittings for its setup and dismantling.
- ✓ An aerial platform of 20m can be easily assembled by two persons within a short time.
- ✓ The whole process is as easy as playing with toy bricks.

Tested Strength and Safety

- ✓ The strength of components and joints is strictly tested. And the access deck can take 200kg/m².

Versatility

- ✓ KITSEN Ringlock Scaffold makes a great combination of simplicity and flexibility. It can be designed and assembled in many ways to suit different work environments.

Long Lifespan

- ✓ All aluminum components are anodized and fitted with cast interlocks, giving the system a lifespan of 10 years or more.

Standard Post & Screw Jack

Standard Post & Snap Pin

KWIKSTAGE SYSTEM

Kwikstage is a universally established prefabricated scaffolding system widely used for building construction internally and externally, decoration, maintenance, etc. It can adapt to complex indoor and outdoor working environments with varying terrain and space constraints. Kwikstage is very popular for its advantages of light weight, modular components and free combinations.

FEATURES & ADVANTAGES

- ✓ Components such as standard posts, horizontal braces and diagonal braces are manufactured from high-strength aluminum alloy. The connecting part of the standard post uses a 4V aluminum profile and the TIG welding method to ensure the rigidity and strength of this part and the balance, stability and load capacity of the whole scaffold. Braces are made by riveting aluminum alloy and steel components together, ensuring high load capacity, assembly stiffness and a long lifespan.
- ✓ Kwikstage is a complete system with main components such as standard posts and diagonal and horizontal braces, plus accessories including platforms, tripods, toe boards, hanging ladders, ladders with handrails and base jacks. The post's four-way connections maintain the rigidity of the scaffold and prevent deformation. Safety hooks and buckles secure accessories to the main scaffold, providing safe and secure access throughout the scaffold.
- ✓ The scaffold can reach a height of 50 meters, satisfying various application requirements.
- ✓ Modular components realize quick and easy erection. Simple erection procedures ensure stringent safety levels can be easily achieved.

FRAME SCAFFOLD

KITSEN Frame Scaffold is a modular frame system serving as working platform for construction and decoration purposes, which is composed of frames, walk-boards, braces, brackets, coupling pins, stair ladders, guardrails and sometimes casters, etc . Normally it is used in one or two tiers by residential contractors, painters and plasterers yet can be stacked several stories high for large-scale construction jobs.

FEATURES & ADVANTAGES

- ✓ Easy assembly and dismantling
- ✓ Fast erection
- ✓ High-strength steel tubing
- ✓ Safe, durable
- ✓ Customization requests accepted

ALUMINIUM TOWER SCAFFOLD

Aluminium Tower Scaffolding is manufactured with Robot Welding technology to offer you the utmost safety for building maintenance, cleaning and decoration work at different heights

◎ FEATURES & ADVANTAGES

- ✓ Quality assured, manufactured and tested in compliance with BS EN 1004:2004
- ✓ High-strength aluminium structure for better durability and safety
- ✓ Safe working load of 272kg per platform level up to a maximum of 1000kg per tower

Suitable for exterior refurbishment

Special tower for yacht maintenance

Suitable for interior refurbishment

Adjustable for use on uneven surfaces

Optionally assorted Aluminium Tower

Aluminium Tower with Optional Configurations

All the towers can be connected together for multiple purposes.

Suitable for different functions

MINI ROLLING SCAFFOLD

The folding scaffolds in this series are light in weight and easy to operate. There are various sizes and designs to meet your special working requirements both indoors and outdoors. These scaffolds are especially suitable for interior and exterior decoration and maintenance.

◎ FEATURES & ADVANTAGES

- ✓ Tested safety & strength
- ✓ Light weight
- ✓ Easy to handle, transport and store
- ✓ Correction list Maintenance-free, with a long lifespan
