

Products: Test Benches

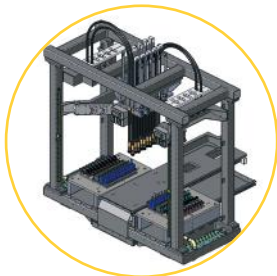

THE MOST COMPLEX HYDRAULIC MACHINES

The hydraulic test benches are a **mark of distinction** in the Parmafluid production, the **highest levels of technology** at the service of the best known component manufacturers of the sector. We can test **pumps, valves, distributors, cylinders, hoses** for use in **production or research**. We propose innovative solutions for ever greater requirements of performance, reliability and speed, putting **electronics** and **automation** at the service of hydraulics.

AUTOMATION

Using the product leaders in this sector, we program **softwares that manage the test cycles** depending on the **automation** required by the client.

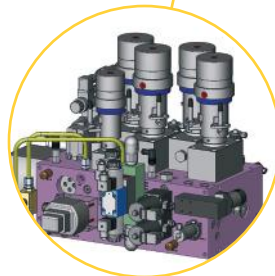

FIXING SYSTEM

We design and install the **component fixing equipment** for both **manual** and **automatic** operations.

MAINTENANCE

We design the machine layout as compact as possible to allow **ease of access**: special **sliding carriages** allow simple quick maintenance.

MANIFOLD

The hydraulic circuit is normally installed using **large circuit manifolds** produced by us, which aid **assembly and maintenance**.
