GROUP COMPANY PROFILE

Company introduction: MEYSHER Group is an international company specializing in the research and development, production and sales of building materials equipment. The company has China's largest concrete brick pallet production base and is also China's largest concrete brick pallet exporter. Concrete brick pallets are exported to 100 countries and regions. In 2015, the company invested in the mechanical intelligent parking equipments division of the listed company Noblift Group. In the past 10 years, the cumulative output value of the parking equipment has reached nearly 100 million US dollars. In 2023, the company and Flex, a well-known German-funded mold company, reached a strategic partnership. Together, they will expand the international market and aim to become the number one brand of brick machine mold exports in China. MEYSHER Group has been focusing on serving customers in the building materials market for 20 years.

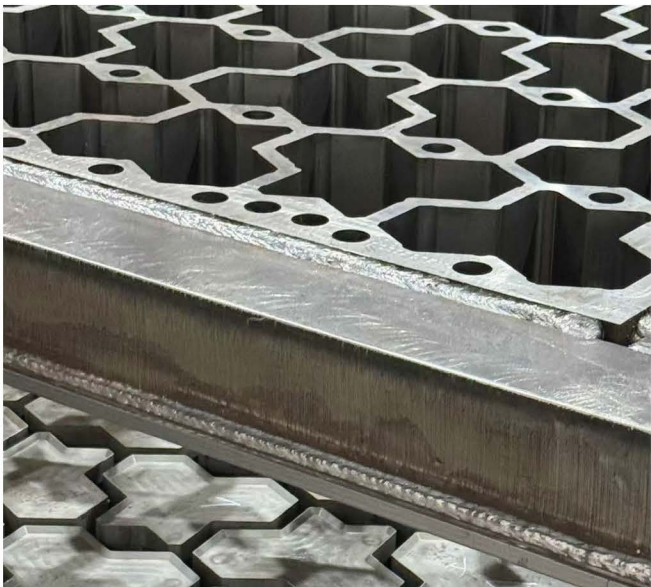

PATENT CERTIFICATE

Matthias Roeder, a Germany craftman, who has more than 25 years' working experience in the field of moulds producing. He is also the founder of Flex Moulds, he has already got more then 20 patents related to moulds structure. He can making suggestions according to customers' requests or difficulties!

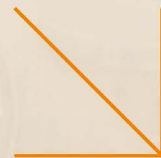

PLANT & WORKSHOP

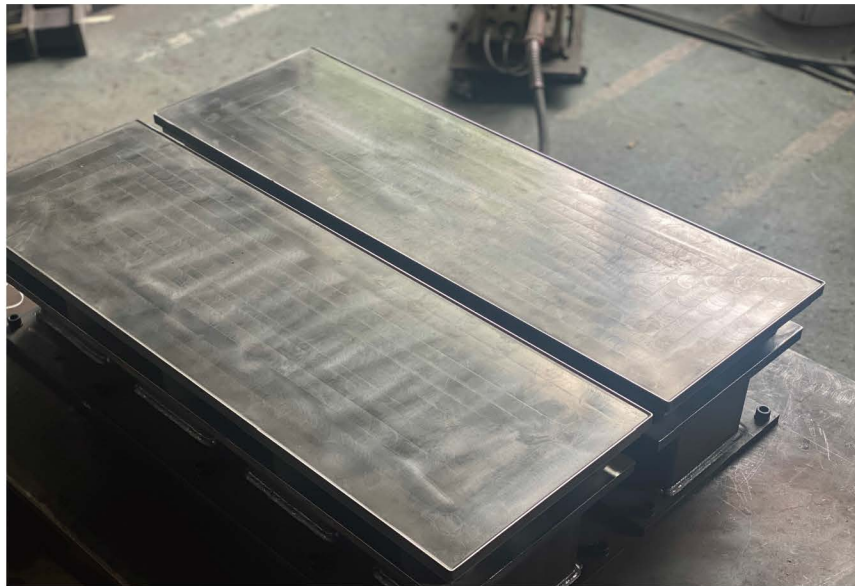

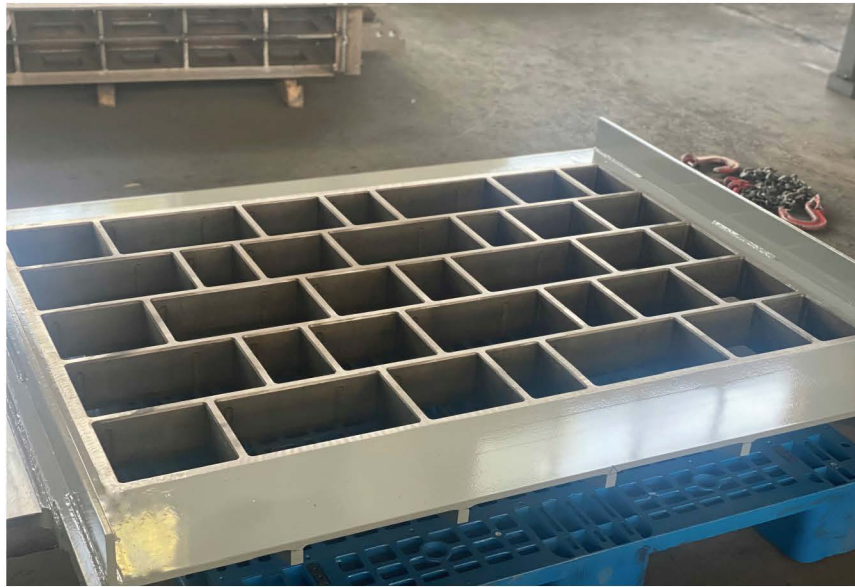

PAVING STONE MOULDS

Our customers benefit from our new process for paving stone mould by standardizing the division plate and connector, bolting whole bottom unit completely.

The advantages are as follows:

- the effect of heat treatment is much better, reduced deformation
- uniform clearance between each shoes and cavity
- easy to change easily-worn part of the mould by yourselves
- shorten the delivery time
- saving cost in the long term
- reusing of frame

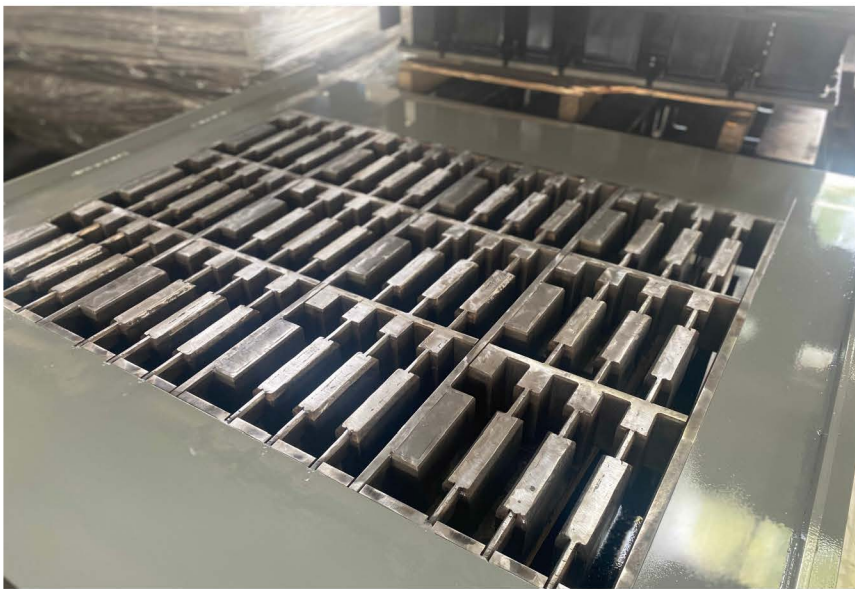

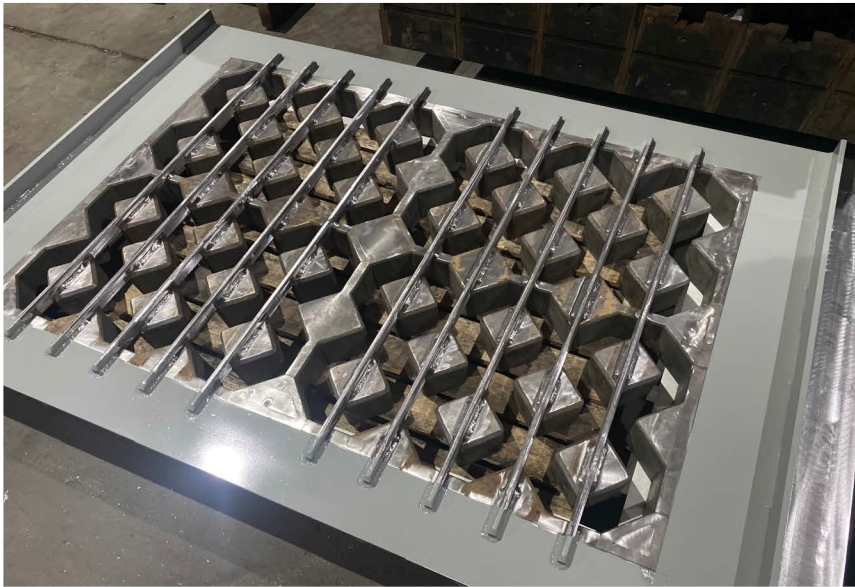

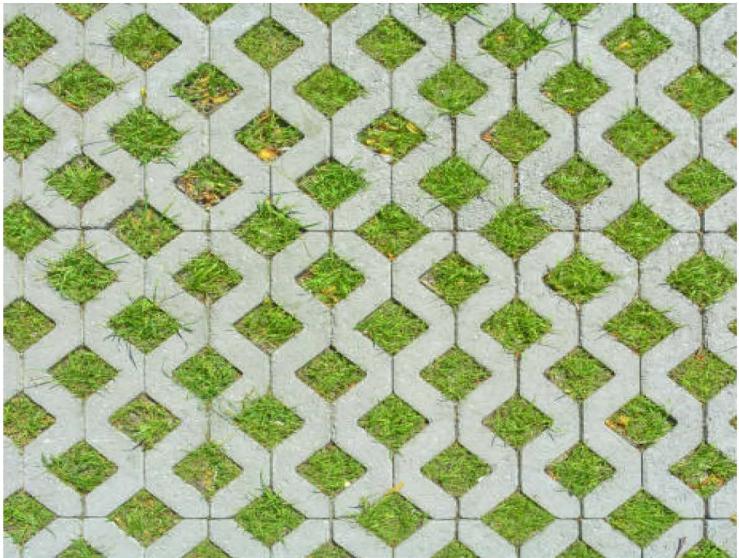

GRASS PAVER MOULDS

They reinforce traffic areas and river banks, simultaneously ensure that they are kept green and allow for the large-scale infiltration of water. Grass pavers are a contribution to the environmental protection. Taicang Flex Moulds meets the high demands for grass paver moulds with innovative process.

The advantages are as follows:

- insert assembled with small parts instead of a whole, increasing the wear resistance
- whole bottom unit be bolted, high dimensional stability with optimum vibration behavior
- all cores can be exchanged individually, leading to a high level of efficiency for maintenance and upkeep
- shorten the delivery time
- saving cost in the long term reusing of frame

MASONRY BLOCK MOULDS

For such kind of blocks, the most important is that the dimensions are precise and weights are consistent. Flex Moulds' complete bolted bottom unit ensures accurate dimensions, improve the vibration behaviour of the mould and thus improves the density of the block.

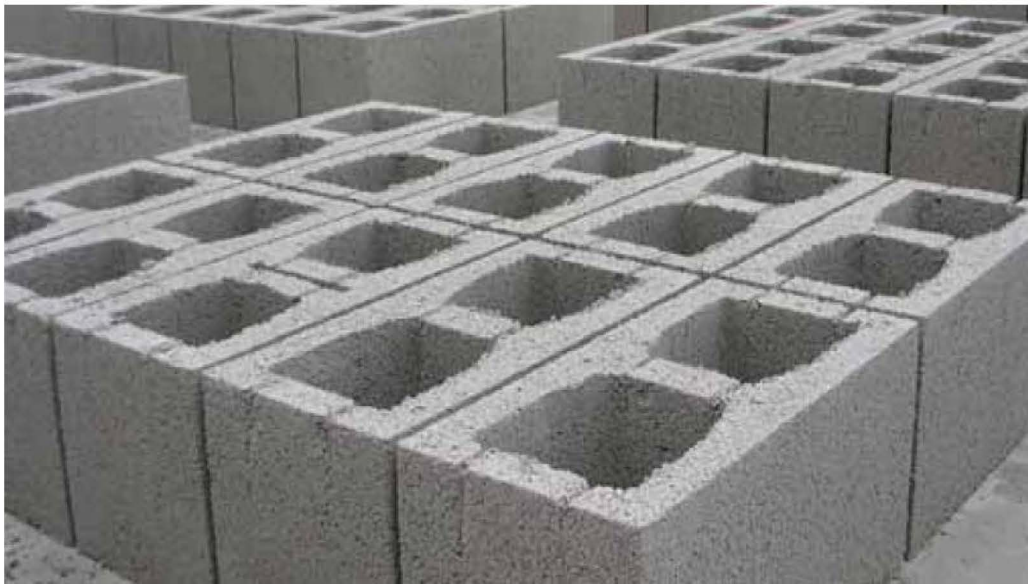

The advantages are as follows:

- quick change of every easily-worn parts
- accurate dimensions of each cavity
- with better vibration behavior and density of the block

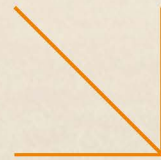

CURBSTONE MOULDS

Our customers benefit from our new process for curbstone stone mould by standardizing the division plate and connector, bolting whole bottom unit completely.

The advantages are as follows:

- the effect of heat treatment is much better, reduced deformation
- uniform clearance between each shoes and cavity
- easy to change easily-worn part of the mould by yourselves
- shorten the delivery time
- saving cost in the long term
- reusing of frame
