COMPANY INTRODUCTION

公司介绍

Gaoyang County Changlong Machinery Factory was established in the 1990s and is a manufacturing enterprise with lost foam casting and mechanical processing as its core. After 23 years of steady development, it has grown from a small factory with just a few people to a casting and machining enterprise with two factories and nearly 100 employees. The two factories cover an area of 50 mu, with a construction area of 18,000 square meters and total assets of 28 million yuan. They have two automatic lost foam production lines and 50 sets of CNC processing equipment, 80% of which are imported equipment such as Mazak, and mori Seiki. The annual output of lost foam castings is over 10,000 tons.

The company is equipped with advanced physical and chemical testing equipment such as spectrometers, metallographic microscopes, universal tensile testing machines, and three-coordinate measuring machines. It has also established a standard physical and chemical laboratory, which can accurately analyze and test various elements, metallographic structures, mechanical properties, and processing accuracy of castings.

With the continuous development of the company, in recent years, our company has actively cooperated with universities such as Zhejiang University City College, constantly enhancing the technological level and R&D strength of the enterprise, and keeping the casting and machining levels of the company always at the forefront of the industry.
