INNOVATION CREATES THE FUTURE

Committed to better user experience, we continuously optimize our products. If there is any discrepancy between the appearance, parameters or configuration in this brochure and the actual product, the physical product or contract shall prevail. Specifications are subject to change without notice. Thank you for your understanding!

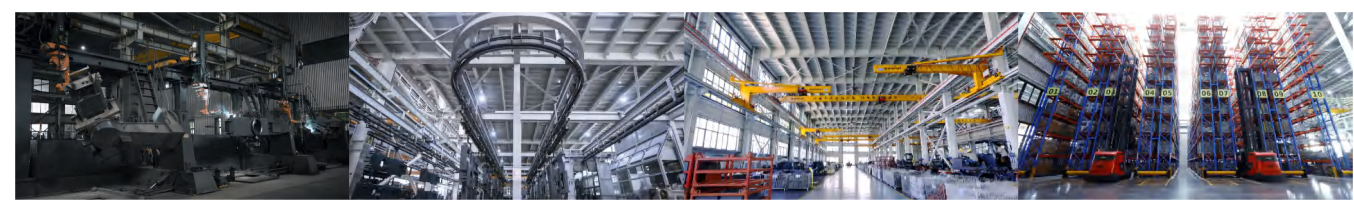

Issue Date: 2026

SINCE 1990 专业轮挖制造商

Fujian Xinyuan Heavy Industry Co., Ltd., founded in 1990, developed and manufactured China's first 5-ton 360-degree full-slewing wheeled hydraulic excavator. It has now grown into a modern enterprise focusing on the R&D and manufacturing of small and medium-sized excavators. Over the past three decades, Xinyuan Heavy Industry has been focusing on the development and innovation of engineering machinery, and has obtained a number of technical patents and corporate honors.

Besides, Xinyuan has built an advanced digital plant, equipped with world-advanced laser cutting equipment, automatic robot welding system, CNC gantry machining center, orbital shot blasting processing line, automatic robot coating system and other advanced production equipments, and has realized highly automated production process for cutting, assembly welding, numerical control processing, surface treatment and coating, etc.

 1990 Established in 1990	 300+ Over 300 employees	 200+ Possessing over 200 patents
 300+ Possessing over 300 service outlets	 1500+ having 1,500 service engineers	 100,000+ Having 100,000 users worldwide

XINYUAN's products have won international acclaim for their unique design, exceptional performance, and reliable quality, with a presence now spanning dozens of countries and regions worldwide, including Russia, Southeast Asia, Europe, South America, Central Asia, and the Middle East.

New generation flagship full-hydraulic wheeled excavator

Efficient

Better fuel economy

Comfortable

More comfort features

Reliable

Heavy-duty reinforced design

The C150W series is a new-generation 15-ton full-hydraulic wheeled excavator independently developed by XINYUAN with a brand-new design concept and integrated advantages. It features a highly matched power and hydraulic system, distinctive family-style appearance, luxurious and comfortable operating space, comprehensive safety design, and excellent usability, with leading overall comprehensive performance.

Adhering to green, environmental protection and sustainable development, XINYUAN applies innovative technologies to its new product line, integrating green concepts to cut energy consumption and environmental impact.

From R&D, manufacturing to after-sales, XINYUAN stays with customers, guided by market demand. We deliver high-performance, efficient and reliable products, refine every detail to help customers gain more profits.

Strong power, fuel-efficient

Efficient, energy-saving and environmentally friendly

CHINA III Emission Standard

The engine delivers a maximum power of 118kW and a maximum torque of 680N·m, with stronger low-speed torque, faster response, reduced operating speed and improved fuel economy. It adopts a reinforced body structure featuring high strength, low vibration and lower noise, reducing driver fatigue during long working hours. Equipped with high-quality filter elements, it has better oil adaptability and can withstand heavy-load working conditions and harsh environments.

The engine boasts mature and reliable technology with stable performance. It has been calibrated specifically for wheel excavator working conditions across different speed ranges, delivering better adaptability and economy, longer oil change intervals, lower maintenance frequency and reduced overall operating costs, bringing tangible benefits to users.

Stable performance

Bosch electronically controlled common-rail fuel system for non-road applications features precise and stable fuel delivery, delivering high performance, low fuel consumption and low noise. Rigorously tested through multiple strict performance verifications, it boasts enhanced sturdiness and durability.

Higher operating efficiency

Equipped with a load sensing hydraulic system and electronically controlled main pump technology, it accurately distributes hydraulic power based on engine power and load changes, combines the high-efficiency ranges of the engine and hydraulic system to maximize power loss reduction, delivering faster, smoother composite actions, better controllability and higher working efficiency for the complete machine.

Good environmental adaptability

Passed rigorous full-machine durability testing at 4,700m altitude; adapts better to extreme conditions like high cold, plateau, tunnels and dust, with less power loss at high altitudes and better cold-start performance in extreme cold.

Optimized upper body design

For heavy-load working environments, the upper platform of the C150 series excavator adopts a brand-new architectural design with a more rational layout of working components. While meeting strength requirements, it delivers excellent convenience for maintenance and overhaul. The stable and reliable structure and optimized center of gravity distribution ensure long-term efficient operation of the equipment; even under high-intensity and high-load working conditions, it can maintain the structural rigidity of the upper platform, achieve smoother operation, reduce equipment wear and extend service life.

Upper body optimization

The body adopts a more scientific mechanical design with a load-bearing main girder structure and large-section D-shaped side beams, and is made of high-strength steel. It can withstand impacts on the body during operation, ensuring the frame structure meets the service requirements of the full life cycle.

Working mechanism

Equipped with a 4.6m boom + 2.5m stick, the bucket width is increased to 1000mm. With a dual boom cylinder configuration, it delivers a larger digging range and higher working efficiency. The whole adopts a reinforced structural design for better reliability and durability.

Large-capacity fuel tank

With a 310L fuel tank, it delivers longer continuous operation endurance. Made of polyethylene via rotomolding process, it features better impact, puncture and corrosion resistance with high cleanliness, eliminating the rust problem that plagues metal fuel tanks.

Great ease of maintenance

Openable body panels enable easy access, and maintenance layouts adopt a windowed design. Large-capacity tool boxes and grease bucket racks are configured on the upper and lower body, providing ample storage space, making operation easier and greatly improving maintenance efficiency.

Comfortable driving

Ergonomically designed

More spacious Better riding experience

The cab features large side windows for a broad view, fitted with an adjustable suspended seat with ventilation for a relaxed, comfortable ride. Multi-point 3D air outlets enable quick adjustment of the cabin temperature.

It comes with a lever shifter and a work mode switching knob, offering simple and easy operation. The integrated backlit control panel has comfortable silicone keys, and includes practical configurations: reversible operating handle, quick brake button, one-key emergency stop, cup holder, storage compartment and Bluetooth speaker.

Equipped with a multi-function full-color display, it delivers clearer and finer imaging, showing real-time vehicle information including virtual gauges, indicator icons and machine status.

The on-board computer monitors equipment status in real time, diagnoses and alarms faults, making overhaul and maintenance simpler and easier.

A separate monitoring image display is configured without affecting gauge display, allowing you to access more information.

Brand-new chassis system

The chassis of Xinyuan C150 series excavator adopts an all-new modular design. It fully accounts for the reliability of core chassis components in harsh working conditions, and integrates multiple convenience-focused designs to greatly facilitate the overhaul and maintenance of chassis parts.

The chassis is fitted with a more powerful hydraulic drive system and a more reliable, safe dual-circuit wet wheel brake system, delivering better traction and off-road passability. It also boasts superior braking performance, reduces driver fatigue and enables easier operation.

Hydraulic drive system

Designed for harsh working conditions, it is equipped with a heavy-duty drive axle and uses a hydraulic pump to drive the hydraulic motor. Power is transmitted to four wheels through the gearbox and differential, realizing hydraulic drive travel and outputting large torque at low speed.

Dual-circuit wheel-side brake

Two independent wet wheel-side brake systems are configured at the front and rear, providing dual guarantees for service braking. The main body of the wheel-side brake adopts a fully sealed design to prevent braking performance from being affected by working conditions such as wading operations.

Dedicated engineering tire

The tire developed for harsh working conditions adopts a tread pattern with larger ground contact area, delivering stronger grip. The entire tire features better support, and the high-performance rubber compound provides superior wear resistance and puncture resistance, resulting in a longer service life.

Chassis design

The newly designed boarding step is more consistent with the overall appearance of the whole machine, and embeds a larger-capacity tool box. With a larger step area and more reasonable height spacing, it allows drivers to enter the cab more easily from the ground.

Extensible for more functions

Wood grapple

Suitable for wood handling in forestry, replaces manual operation, allows free control of gripping and placement at any angle, features flexible movement and multiple claw options.

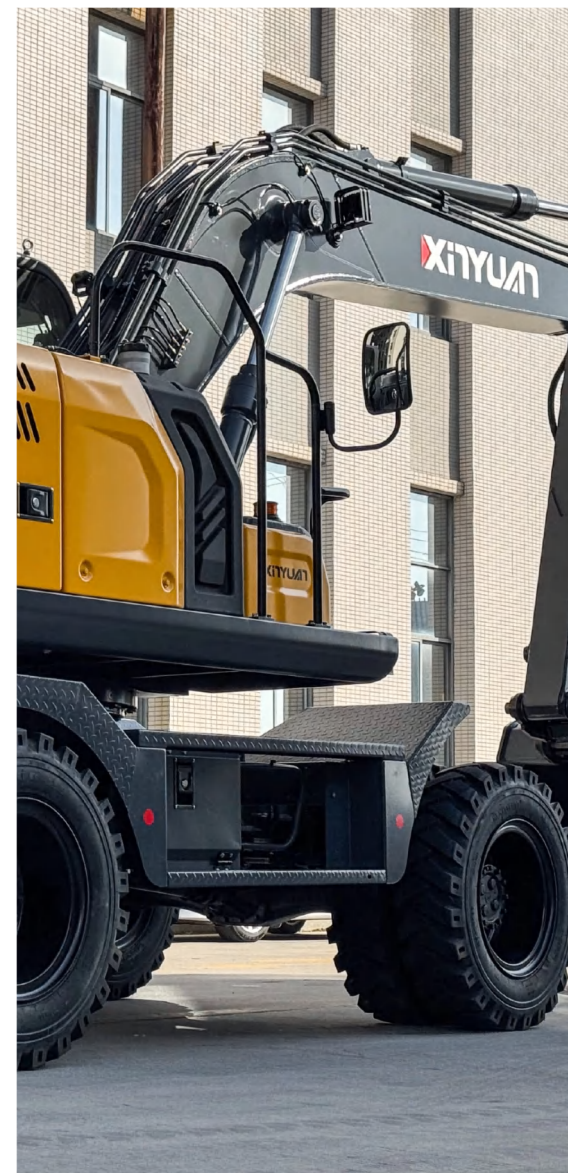

Hydraulic rotator

It is equipped with the function of quick replacement for various attachments, supports 360° rotation and left-right tilting, delivering greater operational flexibility and a wider working range.

Lifting cab

Suitable for material handling, leveling in trains, trucks and cargo compartments; lifting mechanism adds 2.4m cab height for better visibility.

Multiple optional attachments

The quick-change system and various professional attachments developed by Xinyuan Company can expand the application scope of your excavator and help improve production efficiency. You can choose a series of multi-functional attachments including breakers, full-swing clamps, winches, electromagnetic chucks, trimmers, grapple saws, hydraulic wrists, augers, narrow buckets, leveling buckets, forklifts, etc., which are suitable for various working conditions. All attachments are designed to maximize production efficiency and achieve superior durability as much as possible.

Body expansion

The Xinyuan-branded excavator can be optionally equipped with a leg-type chassis assembly for professional working conditions. This assembly includes a front multi-link parallel dozer blade and rear folding outriggers. When performing heavy-load operations such as lifting, extending the outriggers and dozer blade to the ground can increase the span moment of the support surface, effectively improve the balance and stability of the body, enhance terrain adaptability, and ensure safety during operation.

Safety

Regarding the operating environment of excavators, we have made more comprehensive considerations and adopted unique design concepts for safety, which have been integrated into our products to minimize accidents. This includes safety protection for operators on the job: the body image monitoring system, observation mirror and other configurations assist drivers in observing the surroundings, while lights and sounds provide warnings and signals to other external equipment and pedestrians, better safeguarding the safety of our users.

Built on consistent reliability, worthy of your trust.

Xinyuan boasts a senior R&D team and an experienced management & manufacturing team. Our continuous technological innovation, relentless pursuit of production excellence and strict quality control ensure the high quality, high reliability and consistency of our products.

Dedicated to developing industry-leading technologies, we leverage decades of accumulated in-house full-chain R&D and manufacturing capabilities to deliver a variety of outstanding equipment and customized solutions for diverse application scenarios, helping users maximize their value.

Technical R&D capability

Xinyuan boasts an experienced professional technical team. Guided by the vision of "technology reshapes the future", we have focused on independent R&D of engineering machinery for decades, dedicated to delivering diverse innovative intelligent equipment to users.

Manufacturing capability

Xinyuan Company has established an industry-leading digital factory equipped with highly automated production facilities. Through precise control and execution of production processes integrated with information technology, the company guarantees consistent and stable product quality.

Product Line and Standardization

Xinyuan Company's core products are 5-ton to 15-ton excavators, which have been standardized and serialized with strong comprehensive competitive advantages. Relying on superior quality, performance and service, the company has earned excellent reputation and broad market recognition.

Scale and Service Support

Xinyuan Heavy Industry has more than 1,500 service professionals and a large user base, with a presence in dozens of countries and regions worldwide including Russia, Southeast Asia, Europe and the Middle East, and has established a complete global marketing and service network.

Focus on every detail

Quality-oriented

Stay true to the original aspiration

Our corporate culture is always embedded in every attitude and action we take. It drives every ambitious member of our team to pursue infinite creation and challenges, and live up to every trust and expectation placed in us.

From R&D and manufacturing to the terminal service team, we always focus on users' needs and expectations. With rapid response capability, sincere service awareness, rich practical experience and a sound management system, we can provide users with more suitable products and more thoughtful full-process solutions.

From zero to epoch-making products, everything originates from Xinyuan's brand philosophy of passion for creation. In the future, we will continue to explore and expand in cutting-edge technological fields, bringing users products and services with advanced experience.

Standard configuration

Due to continuous product upgrades, specs may differ from brochure.

Contact your dealer for full details!

Engine

- Meets China NRMM Stage III Emission Standard
- Inline four-cylinder, water-cooled, four-stroke
- BOSCH High-pressure Common Rail EFI
- Operating Altitude: 3500m

Hydraulic system

- Load-sensing hydraulic system
- Breaker hydraulic circuit

Upper body section

- Main load-bearing frame
- Side-mounted working device
- 2100kg counterweight
- Tool box
- Handrail guardrail

Chassis system

- Hydraulic motor drive
- High-low speed adjustable gearbox
- Heavy-duty drive axle
- Oscillating front drive axle
- Dual-circuit hydraulic brake system
- Wet wheel-side brake
- Rear dozer blade
- Hydraulic steering system
- Boarding step ladder
- Tool box & lithium grease rack
- Special-purpose engineering tire
- Stone-resistant tire liner

Cab

- Multi-function instrument full-color display
- Full-color display for driving recording
- Gear shift lever
- Work mode selector knob
- Angle-adjustable steering column
- Ventilated rail-type adjustable suspension seat
- Reversible hydraulic control joystick
- Parking control shortcut button
- Manual throttle knob
- Emergency stop button
- Openable upper windshield
- Openable glass, cab with sunroof
- Lower windshield protective mesh
- Washable integrated floor mat
- Dome light
- Storage compartment & cup holder

Electrical and lighting system

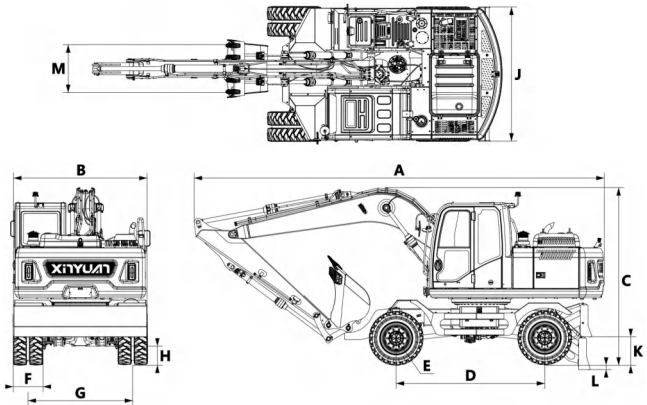

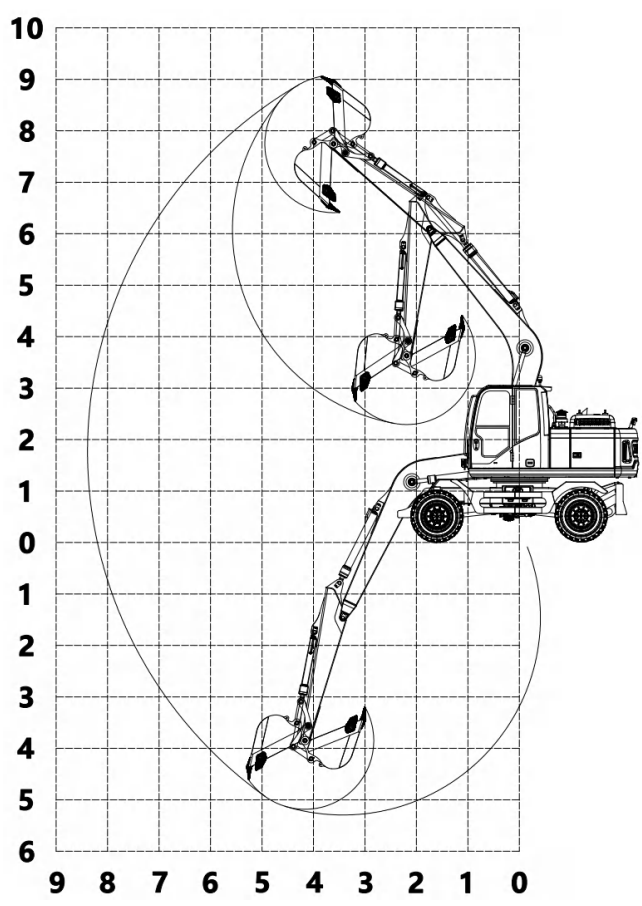

- Maintenance-free battery
- Power cut-off switch for shutdown
- Side and rear cameras
- Boom work lights
- Rear work light
- Headlight
- Tail light
- Side orange warning light
- Top-of-cab orange warning light
- Automobile horn

Other accessories

Tool kit

Performance

产品型号 Model	C150W
发动机型号 Engine Model	玉柴A05
发动机排量 Engine Displacement	4837mL
总功率/转速 Power/speed	118kw/2000rpm
整备重量 Curb Weight	13000kg
斗容 Volume of Bucket	0.57m³
主溢流阀整定压力 Set Pressure of Main Overflow Valve	32MPa
回转设定压力 Swing set pressure	27MPa
流量 Hydraulic Flow Rate	310L/min
最大挖掘力 Maximum Digging Force	75kN
爬坡度 Gradeability	35°
最大牵引力 Maximum Traction Force	55kN
最高行走速度 Max Travel Speed	32km/h
平台回转速度 Swing Speed of Platform	8.5rpm
燃油箱容量 Fuel Tank Capacity	310L
液压油箱容量 Hydraulic Tank Capacity	240L

External dimensions

A 全长 Overall Length	7730mm
B 全宽 Overall Width	2520mm
C 全高 Overall Height	3350mm
D 轴距 Wheel Base	2800mm
E 轮胎型号 Tyre	9.00-20
F 轮胎接地宽度 Width of Grounding	560mm
G 轮距 Wheel Track	1975mm
H 最小离地高度 Min Height Above Ground	360mm
J 推土板宽度 Width of Bulldozing	2520mm
K 推土板最大上升量 Rising distance of Bulldozing	540mm
L 推土板最大下降量 Height of Bulldozing	80mm
M 标配铲斗宽 Width of bucket	1000mm
动臂长度 Boom length	4600mm
斗杆长度 Arm length	2500mm

Scope of work

最大挖掘距离 Max Digging Reach	8390mm
最大挖掘深度 Max Digging Depth	5295mm
最大挖掘高度 Max Digging Height	9060mm
最大卸载高度 Max Dumping Height	6415mm
前部最小回转半径 Min Front Radius	2470mm
尾部最小回转半径 Min Tail Radius	2318mm
