DingLi Construction Machinery

MOBILE COMPONENT MOLDING MACHINE

1.Use dry hard concrete high-frequency vibration form-ing to achieve instant demoulding.

2.After the component is formed, it will fall directly on thedrying site without the need for a chassis

3.It can produce: various special-shaped componentssuch as round or square inspection wells, adjustment sections,isolation piers,U-shaped grooves, and cover platesetc.

4.The equipment production is in a walking manner inthe drying site, without the need for equipment foundation. Aslong as there is a production site, it can be produced, whichis simple and fast.

5.The entire production line can be operated by 2-3 people.

Product types that can be made

Gaotang Dingli Construction Machinery Co., Ltd.
